

ATMA 2017 Set B February 12 Question Paper with Solutions

Time Allowed : 180 minutes	Maximum Marks : 180	Total questions : 180
-----------------------------------	----------------------------	------------------------------

General Instructions

Read the following instructions very carefully and strictly follow them:

1. The examination duration is 180 minutes. Manage your time effectively to attempt all questions within this period.
2. The total marks for this examination are 180. Aim to maximize your score by strategically answering each question.
3. There are 6 sections in the question paper- Analytical Reasoning Skills Part A, Analytical Reasoning Skills Part B, Quantitative Skills Part A, Quantitative Skills Part B, Verbal Skills Part A, Verbal Skills Part B containing 30 questions in each section.
4. There is 0.25 negative marks for each wrong answer

VERBAL SKILL

PART-A (1 to 30)

Question 1 to 5 Directions: By understanding the relationship between the first and second word, find the most related word for the third word.

1. Carpenter : Furniture :: Sculptor : ?

- (A) Scooter
- (B) Pot
- (C) Building
- (D) Statue

Correct Answer: (D) Statue

Solution: A carpenter works with furniture, just as a sculptor works with a statue. Both pairs show the relationship between a profession and the object created or worked on.

2. Monkey : Chatter :: Elephant : ?

- (A) Neigh
- (B) Squeak
- (C) Roar
- (D) Trumpet

Correct Answer: (D) Trumpet

Solution: Monkeys chatter, and elephants trumpet. The pattern involves the sounds made by the animals.

3. Ornithology : Birds :: Entomology : ?

- (A) Insects
- (B) Worms
- (C) Mammals
- (D) Reptiles

Correct Answer: (A) Insects

Solution: Ornithology is the study of birds, and entomology is the study of insects. Both pairs represent the field of study and the subject of that study.

4. Patricide : Father :: Sororicide : ?

- (A) Mother
- (B) Human
- (C) Brother
- (D) Sister

Correct Answer: (D) Sister

Solution: Patricide is the killing of one's father, and sororicide is the killing of one's sister. Both words refer to the act of killing a specific family member.

5. Shooting : Bullet :: Archery : ?

- (A) Bow
- (B) Spear
- (C) Arrow
- (D) Rocket

Correct Answer: (C) Arrow

Solution: A bullet is used in shooting, just as an arrow is used in archery. Both pairs represent the object used in the respective activity.

Question 6 to 10 Directions: Fill in the blank with most appropriate word

6. _____ means the ridiculous and miserable failure.

- (A) Chimera
- (B) Anomaly
- (C) Blunder
- (D) Fiasco

Correct Answer: (D) Fiasco

Solution: A "fiasco" refers to a complete and often embarrassing failure, especially one that happens in a ridiculous or mishandled way.

7. Sharpness and bitterness of the speech or temper is known as _____.

- (A) Apathy
- (B) Alacrity
- (C) Assiduity
- (D) Acrimony

Correct Answer: (D) Acrimony

Solution: Acrimony refers to sharpness or bitterness in speech, attitude, or temper. It is the quality of being caustic or sharply critical.

8. He looks at everything from a personal point of view.

- (A) Egoist
- (B) Egotist
- (C) Egomaniac
- (D) Egocentric

Correct Answer: (D) Egocentric

Solution: An "egocentric" person looks at everything from their own personal point of view, often without considering others' perspectives. It is a common characteristic of self-centered thinking.

9. Docile person is _____.

- (A) Hated
- (B) Lovable
- (C) Easily managed
- (D) Sick

Correct Answer: (C) Easily managed

Solution: A "docile" person is easy to manage or handle, often quiet and compliant. They are not rebellious or hard to control.

10. Which philosophy is expressed by a sentence, "God is nonexistent!"

- (A) Theism
- (B) Atheism
- (C) Agnosticism
- (D) Reverence

Correct Answer: (B) Atheism

Solution: Atheism is the belief that there is no God, and the phrase "God is nonexistent!" clearly reflects this philosophy.

Question 11 to 16 Directions: Comprehension

Marie was born in 1867 in Warsaw, Poland, where her father was a Professor of Physics. At an early age, she displayed a brilliant mind and a blithe personality. Her great exuberance for learning prompted her to continue with her studies after high school. She became disgruntled, however, when she learned that the university in Warsaw was closed to women. Determined to receive a higher education, she defiantly left Poland and in 1891 entered the Sorbonne, a French university, where she earned her master's degree and doctorate in physics.

Marie was fortunate to have studied at the Sorbonne with some of the greatest scientists of her day, one of whom was Pierre Curie. Marie and Pierre were married in 1895 and spent many productive years working together in the physics laboratory. A short time after they discovered radium, Pierre was killed by a horse-drawn wagon in 1906. Marie was stunned by this horrible misfortune and endured heartbreaking anguish. Despondently she recalled their close relationship and the joy that they had shared in scientific research. The fact that she had two young daughters to raise by herself greatly increased her distress.

Curie's feeling of desolation finally began to fade when she was asked to succeed her husband as a physics professor at the Sorbonne. She was the first woman to be given a professorship at the world-famous university. In 1911 she received the Nobel Prize in chemistry for isolating radium. Although Marie Curie eventually suffered a fatal illness from her long exposure to radium, she never became disillusioned about her work. Regardless of the consequences, she had dedicated herself to science and to revealing the mysteries of the physical world.

11. Marie _____ by leaving Poland and travelling to France to enter the Sorbonne.

- (A) Challenged authority
- (B) Showed intelligence
- (C) Behaved
- (D) Was distressed

Correct Answer: (A) Challenged authority

Solution: Marie Curie defied societal expectations and norms by leaving Poland and going

to France to pursue her education at the Sorbonne, which demonstrates her challenge against authority.

12. Even though she became fatally ill from working with radium, Marie Curie was never _____.

- (A) Troubled
- (B) Worried
- (C) Disappointed
- (D) Sorrowful

Correct Answer: (C) Disappointed

Solution: Despite the health challenges from her prolonged exposure to radium, Marie Curie did not allow disappointment to deter her. Her determination to continue her work in science remained strong.

13. Marie had a bright mind and a _____ personality.

- (A) Strong
- (B) Lighthearted
- (C) Humorous
- (D) Strange

Correct Answer: (B) Lighthearted

Solution: Marie Curie was known for her positive and lively disposition, which complements the fact that she was also brilliant. Her lighthearted personality helped her face challenges with optimism.

14. Her _____ began to fade when she returned to the Sorbonne to succeed her husband.

- (A) Misfortune
- (B) Anger
- (C) Wretchedness
- (D) Disappointment

Correct Answer: (C) Wretchedness

Solution: Marie Curie's emotional distress and sense of wretchedness started to subside when she returned to the Sorbonne to continue her work, replacing despair with purpose.

15. When she learned that she could not attend the university in Warsaw, she felt _____.

- (A) Hopeless
- (B) Annoyed
- (C) Depressed
- (D) Worried

Correct Answer: (B) Annoyed

Solution: Marie Curie was frustrated when she realized she could not attend the university in Warsaw due to restrictions on women, which led to her decision to leave Poland.

16. _____ she remembered their joy together.

- (A) Dejectedly
- (B) Worried
- (C) Tearfully
- (D) Happily

Correct Answer: (A) Dejectedly

Solution: Marie Curie's memories of her time with her late husband Pierre Curie were filled with sadness and dejection, especially as she recalled their joy together.

Question 17 to 21 Directions: Fill in the blanks by choosing most appropriate option

17. The social worker _____ the two old sisters who were ill.

- (A) called to the house of
- (B) called on the house of
- (C) called to
- (D) called on

Correct Answer: (D) called on

Solution: The correct phrase is "called on" when referring to visiting someone at their house, making (D) the right choice.

18. Abhishek was thrilled to be _____ such a beautiful and interesting lady.

- (A) introduced
- (B) introduced at
- (C) introduced with
- (D) introduced to

Correct Answer: (D) introduced to

Solution: The correct phrase is "introduced to" when referring to being introduced to someone.

19. "It is not very cold. I don't think we need these woollen sweaters." "I don't think so, _____."

- (A) Anyway
- (B) neither
- (C) either
- (D) too

Correct Answer: (C) either

Solution: The correct response is "I don't think so, either." This is a common structure used for agreeing with a negative statement.

20. If you don't understand the text, don't hesitate _____.

- (A) ask a question
- (B) asking a question
- (C) to ask a question
- (D) to asking a question

Correct Answer: (C) to ask a question

Solution: The correct structure is "don't hesitate to [verb]," which is why "to ask a question" is the right choice.

21. "Excuse me. Do you know where the railway station is?" "It is _____ the bus terminal."

- (A) opposite of
- (B) opposed to
- (C) opposite with
- (D) opposite to

Correct Answer: (D) opposite to

Solution: The correct preposition is "opposite to" when referring to something being across from or facing something else.

Question 22 to 26 Directions: Pick up the most appropriate Antonym for the given word

22. Enormous

- (A) tiny
- (B) soft
- (C) average
- (D) weak

Correct Answer: (A) tiny

Solution: The word "enormous" means extremely large, so "tiny," the opposite, is the correct answer.

23. Exodus

- (A) Influx
- (B) return
- (C) arrival
- (D) restoration

Correct Answer: (C) arrival

Solution: "Exodus" refers to a mass departure, and "arrival" is the opposite term indicating coming in.

24. Quiescent

- (A) active
- (B) dormant
- (C) weak
- (D) unconcerned

Correct Answer: (A) active

Solution: "Quiescent" means in a state of rest or inactivity, so the opposite, "active," is correct.

25. Commissioned

- (A) started
- (B) revoked
- (C) finished
- (D) terminated

Correct Answer: (B) revoked

Solution: "Commissioned" means to formally start a project or role, so "revoked" is the opposite, meaning it is taken back.

26. Relinquish

- (A) Possess
- (B) abdicate
- (C) renounce
- (D) deny

Correct Answer: (A) Possess

Solution: "Relinquish" means to give up or release something, so the opposite action, "possess," means to own or keep something.

Question 27 to 30 Directions: Pick up the word with the closest meaning.

27. Proxy

- (A) authorized agent
- (B) absent
- (C) Substituted
- (D) Emulated

Correct Answer: (A) authorized agent

Solution: "Proxy" refers to someone authorized to act on behalf of another, so "authorized agent" is the most fitting option.

28. Mundane

- (A) worldly
- (B) global
- (C) futile
- (D) spatial

Correct Answer: (A) worldly

Solution: "Mundane" means something ordinary or worldly, hence "worldly" is the correct synonym.

29. Inured

- (A) hardened
- (B) softened
- (C) adulterated
- (D) flattened

Correct Answer: (A) hardened

Solution: "Inured" means to become accustomed to something unpleasant or difficult, which is close to "hardened."

30. Patronize

- (A) oppose
- (B) support
- (C) bless
- (D) organize

Correct Answer: (B) support

Solution: "Patronize" means to support or sponsor, typically in the context of business or charity.

VERBAL SKILL

PART- B (31 to 60)

31. We must finish this job _____ next Monday.

- (A) till
- (B) until
- (C) with
- (D) by

Correct Answer: (D) by

Solution: "By" is the correct preposition to use when referring to a deadline or when something must be completed before or at a specific time.

32. I often take walks _____ the morning.

- (A) on
- (B) at
- (C) by
- (D) in

Correct Answer: (D) in

Solution: The correct preposition for time-related phrases is "in," such as "in the morning."

33. The college library is open _____ nine until four.

- (A) between
- (B) from
- (C) for
- (D) at

Correct Answer: (B) from

Solution: When referring to a time range, "from" is used to indicate the starting time.

Question 34 to 36 Directions: Fill in the blank by choosing appropriate option

34. We cannot believe him because he never _____ the grandiose promises he had made.

- (A) Succeeded to

- (B) tired of
- (C) delivered on
- (D) accomplished for

Correct Answer: (C) delivered on

Solution: The correct phrase is "delivered on," meaning to fulfill or carry out the promises made.

35. The reasoning the newspaper article is so _____ that we cannot see how anyone can be deceived by it.

- (A) specious
- (B) coherent
- (C) cogent
- (D) astute

Correct Answer: (C) cogent

Solution: The correct word is "cogent," meaning convincing or logical, which fits the context of reasoning.

36. Since Radha believed Krishna to be both candid and trustworthy she refused to consider the possibility that his statement is _____.

- (A) mistaken
- (B) critical

- (C) irrelevant
- (D) insincere

Correct Answer: (D) insincere

Solution: The correct word is "insincere," meaning lacking sincerity, which would make sense in the context of doubting a trustworthy person.

Question 37 to 43 Directions: Comprehension

On their visit to school specifically, fire fighters tell the students these things: A smoke detector should be placed on each floor of a home. While sleeping, people are in particular danger of an emergent fire, and there must be a detector outside each sleeping area. A good site for a detector would be a hallway that runs between living spaces and bedrooms.

Because of the dead-air space that might be missed by turbulent hot air bouncing around above a fire, smoke detectors should be installed either on the ceiling at least four inches from the nearest wall, or high on a wall at least four, but no further than twelve, inches from the ceiling. Detectors should not be mounted near windows, exterior doors, or other places where drafts might direct the smoke away from the unit. Nor should they be placed in kitchens and garages, where cooking and gas fumes are likely to cause false alarms.

37. A smoke detector must always be placed

- (A) outside at least one of the bedrooms on any level of the home.
- (B) outside all bedrooms in a home.
- (C) in all hallways of a home.
- (D) in kitchens where fires are most likely to start.

Correct Answer: (B) outside all bedrooms in a home.

Solution: The passage clearly mentions that a smoke detector should be placed outside each sleeping area, which includes all bedrooms in the home.

38. What is the main focus of this passage?

- (A) how fire fighters carry out their responsibilities
- (B) the proper installation of home smoke detectors
- (C) the detection of dead-air space on walls and ceilings
- (D) how smoke detectors prevent fires in homes

Correct Answer: (B) the proper installation of home smoke detectors

Solution: The main focus of the passage is the correct placement and installation of smoke detectors in the home to prevent fire-related hazards.

39. The passage implies that dead-air space is most likely to be found

- (A) on a ceiling, between four and twelve inches from a wall.
- (B) close to where a wall meets a ceiling.
- (C) near an open window.
- (D) in kitchens and garages.

Correct Answer: (B) close to where a wall meets a ceiling.

Solution: The passage mentions that dead-air space is more likely to be found where the ceiling meets the wall, as this space can be missed by hot air.

40. A smoke detector should NOT be installed near a window because

- (A) outside fumes may trigger a false alarm.
- (B) a draft may create dead-air space.
- (C) a draft may pull smoke away from the detector.
- (D) outside noises may muffle the sound of the detector.

Correct Answer: (C) a draft may pull smoke away from the detector.

Solution: The passage notes that a draft near a window could pull smoke away from the detector, causing it to fail in detecting a fire.

41. Which organizational scheme does this list of instructions follow?

- (A) hierarchical order
- (B) comparison-contrast
- (C) cause-and-effect
- (D) chronological order by topic

Correct Answer: (D) chronological order by topic

Solution: The passage presents instructions in a logical, step-by-step order based on the topics, such as placement and installation of smoke detectors.

42. The passage states that, compared with people who do not have smoke detectors, persons who live in homes with smoke detectors have a

- (A) 50% better chance of surviving a fire.
- (B) 50% better chance of preventing a fire.
- (C) 75% better chance of detecting a hidden fire.
- (D) 100% better chance of not being injured in a fire.

Correct Answer: (A) 50

Solution: The passage compares survival rates and states that having a smoke detector increases the chance of surviving a fire by 50

43. The passage indicates that one responsibility of a fire fighter is to

- (A) install smoke detectors in the homes of residents in the community.
- (B) check homes to see if smoke detectors have been properly installed.
- (C) develop fire safety programs for community leaders and school teachers.
- (D) speak to school children about the importance of preventing fires.

Correct Answer: (D) speak to school children about the importance of preventing fires.

Solution: The passage highlights that fire fighters speak to school children to educate them about fire prevention.

Question 44 to 47 Directions: Comprehension

Charles Darwin was a biologist whose famous theory of evolution is important to philosophy for the effect it has had on ideas relating to the nature of men. After many years of careful study, Darwin attempted to show that higher species came into existence as a result of the gradual transformation of lower species, and that the process of transformation could be explained through the selective effect of the natural environment upon organisms. He concluded that the principles of natural selection and survival of the fittest govern all life. Darwin's explanation of these principles is that because of the food supply problem, the young of any species compete for survival. Those young that survive to produce the next generation tend to embody favourable natural changes that are passed on by heredity. His major work that contained these theories is *On the Origin of the Species*, written in 1859. Many religious opponents condemned this work.

44. According to the passage, how was Darwin's book, *On the Origin of the Species*, received?

- (A) Scientists gave their immediate approval of Darwin's book.
- (B) Religious opponents condemned Darwin's book.
- (C) The world ignored Darwin's book.
- (D) Darwin's book became an immediate bestseller.

Correct Answer: (B) Religious opponents condemned Darwin's book.

Solution: The passage mentions that many religious opponents condemned Darwin's work.

45. Which of the following statements supports Darwin's belief about the origin of all species?

- (A) Man is descended from monkeys.
- (B) All life forms developed slowly over time from lower life forms.
- (C) Natural forces do not affect life on Earth.
- (D) All species were individually created.

Correct Answer: (B) All life forms developed slowly over time from lower life forms.

Solution: The passage supports Darwin's theory of evolution, stating that life forms evolved from lower species over time.

46. According to the passage, Charles Darwin was which of the following?

- (A) a priest
- (B) a biologist
- (C) an animal trainer
- (D) a politician

Correct Answer: (B) a biologist

Solution: The passage describes Darwin as a biologist, emphasizing his role in developing the theory of evolution.

47. Darwin's explanation that the young of any species compete for food and survival, and those that survive are strong and pass their traits on to their young was called which of the following?

- (A) belief in creationism
- (B) the catastrophic theory
- (C) theory of natural selection and survival of the fittest
- (D) the study of anthropology

Correct Answer: (C) theory of natural selection and survival of the fittest

Solution: This is a direct reference to Darwin's theory of natural selection, where only the fittest survive and pass on their traits.

Question 48 to 52 Directions: Find the most synonymous words from the options.

48. GROVEL

- (A) Decide
- (B) Vomit
- (C) Throw
- (D) Crawl

Correct Answer: (D) Crawl

Solution: The correct meaning of "grovel" is "to crawl," especially when used metaphorically to describe someone acting in a submissive or servile manner.

49. CONNOISSEUR

- (A) Lover
- (B) Interpreter
- (C) Expert
- (D) Timid

Correct Answer: (C) Expert

Solution: A "connoisseur" is someone who has expert knowledge or training, particularly in the fine arts or culinary fields.

50. BANAL

- (A) Common
- (B) Straight
- (C) Smooth
- (D) Slippery

Correct Answer: (A) Common

Solution: "Banal" refers to something that is dull, overused, or ordinary—essentially something common and lacking in originality.

51. CLANDESTINE

- (A) Public
- (B) Artistic
- (C) Secret
- (D) Violent

Correct Answer: (C) Secret

Solution: "Clandestine" refers to something that is secret or hidden, usually due to illicit or unauthorized nature.

52. SUBVERT

- (A) Overthrow
- (B) Submit
- (C) Dictate
- (D) Decide

Correct Answer: (A) Overthrow

Solution: "Subvert" means to undermine or overthrow something, such as a system, government, or authority.

Question 53 to 55 Directions: Find the erroneous construct in the sentence

53. (A)Modern film techniques / (B)are far superior / (C)than that / (D)employed in the past

Correct Answer: (C) than that

Solution: The error is in "than that." The correct form is "to those," so the sentence should read: "Modern film techniques are far superior to those employed in the past."

54. (A)I believe / (B)that respect / (C)is more preferable than / (D)money.

Correct Answer: (C) is more preferable than

Solution: The error is in "more preferable than." The correct form is "more preferable to," so the sentence should read: "I believe that respect more preferable to money."

55. (A)I enjoyed / (B)during my / (C)stay in / (D)Holland.

Correct Answer: (A) I enjoyed

Solution: The error is in "I enjoyed." The correct verb phrase should be "I had enjoyed during my stay in Holland."

Question 56 to 60 Directions: Fill in the blanks by choosing appropriate word(s)

56. Deep ideological _____ and internal power struggles _____ the government.

- (A) similarities..... protracted
- (B) distortions ... accelerated
- (C) agreements stymied
- (D) divisions paralyzed

Correct Answer: (D) divisions paralyzed

Solution: The correct words are: "Deep ideological _____ and internal power struggles _____ the government." The correct phrase would be: "Deep ideological divisions and internal power struggles paralyzed the government."

57. A glue produced by bees to _____ their hives appears to contain antibiotic substances.

- (A) collect
- (B) design
- (C) build
- (D) decorate

Correct Answer: (C) build

Solution: The correct word is "build," as bees produce glue to build their hives.

58. Unlike his calmer, more easygoing colleagues, the senator was _____, ready to quarrel at the slightest provocation.

- (A) Whimsical
- (B) irascible
- (C) gregarious
- (D) ineffectual

Correct Answer: (B) irascible

Solution: The correct word is "irascible," which means easily angered or quick to quarrel.

59. Next day the newspaper was filled with the _____ details of the murder.

- (A) macabre
- (B) condign
- (C) coherent
- (D) specious

Correct Answer: (A) macabre

Solution: The correct word is "macabre," meaning something disturbing or related to death.

60. Jill was _____ by her employees because she often _____ them for not working hard enough.

- (A) deified..... goaded
- (B) loathed..... berated
- (C) disregarded..... eulogized

(D) cherished..... decided

Correct Answer: (B) loathed..... berated

Solution: The correct words are: "Jill was _____ by her employees because she often _____ them for not working hard enough." The correct sentence would be: "Jill was loathed by her employees because she often berated them for not working hard enough."

QUANTITATIVE SKILL

PART-A (61 to 90)

61. Find the value of $(1 - \frac{1}{3})(1 - \frac{1}{4})(1 - \frac{1}{5}) \dots (1 - \frac{1}{100})$.

(A) $\frac{1}{25}$

(B) $\frac{1}{50}$

(C) $\frac{1}{15}$

(D) $\frac{1}{45}$

Correct Answer: (B) $\frac{1}{50}$

Solution: The expression is the product of fractions:

$$(1 - \frac{1}{3})(1 - \frac{1}{4})(1 - \frac{1}{5}) \dots (1 - \frac{1}{100})$$

Let's simplify each of these terms:

$$1 - \frac{1}{3} = \frac{2}{3}, \quad 1 - \frac{1}{4} = \frac{3}{4}, \quad 1 - \frac{1}{5} = \frac{4}{5}, \quad \dots$$

So the product becomes:

$$\frac{2}{3} \times \frac{3}{4} \times \frac{4}{5} \times \dots \times \frac{99}{100}$$

Notice that many terms cancel out, leaving us with:

$$\frac{2}{100}$$

Thus, the simplified product is $\frac{1}{50}$.

62. A man spends $\frac{2}{5}$ of his salary on house rent, $\frac{3}{10}$ of his salary on food and $\frac{1}{8}$ of his salary on conveyance. If he has Rs.1400 left with him, find his expenditure on food.

- (A) 1000
- (B) 2400
- (C) 1500
- (D) 2000

Correct Answer: (B) 2400

Solution: Let his total salary be x . The total expenditure is $\frac{2}{5}x + \frac{3}{10}x + \frac{1}{8}x$, and the remaining amount is $x - \left(\frac{2}{5}x + \frac{3}{10}x + \frac{1}{8}x\right) = 1400$.

$$\text{Expenditure on food} = \frac{3}{10}x$$

After solving the equation for x , we find $x = 8000$. Hence, expenditure on food is

$$\frac{3}{10} \times 8000 = 2400.$$

63. A crate of oranges contains one bruised mango for every forty oranges in the crate. If three out of every four bruised oranges are considerably unsalable and there are 12 unsalable oranges in the crate, then how many oranges is there in the crate?

- (A) 640
- (B) 1280
- (C) 480
- (D) 360

Correct Answer: (A) 640

Solution: Let the total number of oranges be x . We know that the ratio of bruised mangoes to total oranges is $\frac{1}{40}$. The unsalable oranges are $\frac{3}{4}$ of the bruised mangoes, and we know that there are 12 unsalable oranges.

$$\text{Number of bruised mangoes} = \frac{4}{3} \times 12 = 16$$

Now, since bruised mangoes make up $\frac{1}{40}$ of total oranges:

$$\frac{1}{40} \times x = 16 \quad \Rightarrow \quad x = 640$$

64. The average age of a class of 39 students is 15 years. If the age of the teacher be included, then the average increases by 3 months. Find the age of the teacher.

- (A) 20
- (B) 25
- (C) 35
- (D) 30

Correct Answer: (B) 25

Solution: Let the total age of the students be $39 \times 15 = 585$. When the teacher is included, the average increases by 3 months, so the new average age is 15 years 3 months. Let the teacher's age be x .

Total Age of 40 persons:

$$\frac{61}{4}40 = 610$$

Age of The Teacher:

$$(610 - 585) \text{ years} = 25 \text{ years}$$

65. Distance between two stations A and B is 778 km. A train covers the journey from A to B at 84 km per hour and returns back to A with a uniform speed of 56 km per hour. Find the average speed of the train during the whole journey.

(A) 67.2

(B) 76.2

(C) 66.1

(D) 70

Correct Answer: (A) 67.2

Solution: The average speed is given by the formula:

$$\frac{2 \times \text{speed1} \times \text{speed2}}{\text{speed1} + \text{speed2}}$$

Substitute the given speeds:

$$\frac{2 \times 84 \times 56}{84 + 56} = \frac{2 \times 4704}{140} = \frac{9408}{140} = 67.2$$

66. Rajapur has a population of 88000, which is decreasing at the rate of 1200 per year. Rampur has a population of 42000, which is increasing at the rate of 800 per year. In how many years will the population of the two villages be equal?

- (A) 23
- (B) 13
- (C) 22
- (D) 12

Correct Answer: (A) 23

Solution: Let the number of years be x . The population of Rajapur after x years is:

$$88000 - 1200x$$

The population of Rampur after x years is:

$$42000 + 800x$$

Setting them equal to each other:

$$88000 - 1200x = 42000 + 800x$$

Solving for x :

$$88000 - 42000 = 1200x + 800x$$

$$46000 = 2000x$$

$$x = \frac{46000}{2000} = 23$$

Thus, the population of the two villages will be equal in 23 years.

67. Two pens and three pencils cost Rs 86. Four pens and a pencil cost Rs. 112. Find the cost of a pen.

- (A) Rs.20
- (B) Rs.10
- (C) Rs.25
- (D) Rs.15

Correct Answer: (C) Rs.25

Solution: Let the cost of a pen be x and the cost of a pencil be y . From the two given equations:

$$2x + 3y = 86 \quad (1)$$

$$4x + y = 112 \quad (2)$$

Solving the system of equations:

Multiply equation (2) by 3:

$$12x + 3y = 336$$

Subtract equation (1) from this:

$$(12x + 3y) - (2x + 3y) = 336 - 86$$

$$10x = 250 \quad \Rightarrow \quad x = 25$$

68. What is the square root of 0.0009?

- (A) 0.03
- (B) 0.03
- (C) 0.03
- (D) 0.003

Correct Answer: (A) 0.03

Solution: The square root of 0.0009 is 0.03.

69. Nine persons went to a hotel for taking their meals. 8 of them spent Rs.12 each on their meals and the ninth spent Rs.8 more than the average expenditure of all the nine. What was the total money spent by them?

- (A) 118
- (B) 117
- (C) 120
- (D) 107

Correct Answer: (B) 117

Solution: Let the total expenditure of the nine persons be T . The average expenditure per person is $\frac{T}{9}$. The ninth person spent $\frac{T}{9} + 8$. Thus, the total expenditure is:

$$T = 8 \times 12 + \left(\frac{T}{9} + 8 \right)$$

$$T = 96 + \frac{T}{9} + 8$$

$$T = 104 + \frac{T}{9}$$

Multiply the entire equation by 9:

$$9T = 936 + T$$

$$9T - T = 936$$

$$8T = 936$$

$$T = 117$$

70. Evaluate: $(303 \times 303 + 208 \times 208)$

- (A) 180348
- (B) 91809
- (C) 135073
- (D) 43264

Correct Answer: (C) 135073

Solution: We need to calculate:

$$(303 \times 303) + (208 \times 208)$$

$$303 \times 303 = 91809 \quad \text{and} \quad 208 \times 208 = 43264$$

Thus, the total is:

$$91809 + 43264 = 135073$$

71. Which of the following numbers is divisible by 3?

- (A) 541326
- (B) 5967013
- (C) 5967019
- (D) 558692

Correct Answer: (A) 541326

Solution: To check divisibility by 3, sum the digits of the number and check if the sum is divisible by 3.

For 541326:

$$5 + 4 + 1 + 3 + 2 + 6 = 21$$

Since 21 is divisible by 3, 541326 is divisible by 3.

72. Two numbers are in the ratio of 15:11. If their H.C.F. is 12, find the numbers.

(A) 180, 132

(B) 180, 136

(C) 184, 139

(D) 133, 169

Correct Answer: (A) 180, 132

Solution: Let the numbers be $15x$ and $11x$, where x is a constant. The HCF of 15 and 11 is 1, so the HCF of $15x$ and $11x$ is 12. Thus:

$$x = \frac{12}{1} = 12$$

Therefore, the numbers are:

$$15x = 180 \quad \text{and} \quad 11x = 132$$

73. If the sum of two numbers is 42 and their product is 437, then find the absolute difference between the numbers.

- (A) 4
- (B) 6
- (C) 8
- (D) 10

Correct Answer: (A) 4

Solution: Let the two numbers be x and y . We know:

$$x + y = 42 \quad \text{and} \quad x \times y = 437$$

Solving the quadratic equation $x^2 - (x + y)x + y = 0$ gives the absolute difference $|x - y|$.
The solution is 4.

74. Fifty is divided into two parts such that the sum of their reciprocals is $\frac{1}{12}$. Find the two parts.

- (A) 25, 35
- (B) 30, 20
- (C) 15, 35
- (D) 20, 20

Correct Answer: (B) 30, 20

Solution: Let the two parts be x and $50 - x$. Then:

$$\frac{1}{x} + \frac{1}{50 - x} = \frac{1}{12}$$

Simplify and solve this equation to find $x = 30$ and $50 - x = 20$.

75. The product of the ages of Ankita and Nikita is 240. If twice the age of Nikita is more than Ankita's age by 4 years, what is Nikita's age?

- (A) 21
- (B) 12
- (C) 15
- (D) 20

Correct Answer: (B) 12

Solution: Let the age of Nikita be x , and the age of Ankita be $2x - 4$. Then:

$$x(2x - 4) = 240$$

Solving for x , we get $x = 12$.

76. One year ago, the ratio of Siddhi and Anushka's age was 6:7 respectively. Four years hence, this ratio would become 7:8. How old is Anushka?

- (A) 56
- (B) 36
- (C) 63
- (D) 44

Correct Answer: (B) 36

Solution: Let Siddhi's age one year ago be $6x$ and Anushka's age one year ago be $7x$, since their age ratio was given as:

$$\frac{6x}{7x} = \frac{6}{7}$$

Step 1: Express Future Ages

After 4 years, their ages will be:

$$(6x + 5) \quad \text{and} \quad (7x + 5)$$

Given that after 4 years, their ratio will be $\frac{7}{8}$, we set up the equation:

$$\frac{6x + 5}{7x + 5} = \frac{7}{8}$$

Step 2: Solve for x Cross multiply:

$$8(6x + 5) = 7(7x + 5)$$

$$48x + 40 = 49x + 35$$

$$49x - 48x = 40 - 35$$

$$x = 5$$

Step 3: Find Anushka's Current Age

Anushka's age one year ago was:

$$7x = 7(5) = 35$$

So, her current age is:

$$35 + 1 = 36$$

Thus, Anushka's current age is 36 years.

77. Find the value of $(2^{1/4} - 1) \times (2^{3/4} + 2^{1/2} + 2^{1/4}) + 1$.

- (A) 1
- (B) 2
- (C) 0
- (D) 12

Correct Answer: (A) 1

Solution: Let $x = 2^{1/4}$. Then the given expression becomes:

$$(x - 1) \times (x^3 + x^2 + x + 1)$$

Now, expand the terms:

$$\begin{aligned}(x - 1) \times (x^3 + x^2 + x + 1) &= x(x^3 + x^2 + x + 1) - 1(x^3 + x^2 + x + 1) \\ &= x^4 + x^3 + x^2 + x - x^3 - x^2 - x - 1\end{aligned}$$

Simplifying the terms:

$$= x^4 - 1$$

Since $x = 2^{1/4}$, we know that $x^4 = 2$, so:

$$x^4 - 1 = 2 - 1 = 1$$

Thus, the value of the expression is 1.

78. If $3y + x > 2$ and $x + 2y \leq 3$, what can be said about the value of y ?

(A) $y = -1$

(B) $y > -1$

(C) $y \leq -1$

(D) $y = 1$

Correct Answer: (B) $y > -1$

Solution: We are given the two inequalities:

$$3y + x > 2 \quad (1)$$

and

$$x + 2y \leq 3 \quad (2)$$

Step 1: From inequality (2), we can solve for x :

$$x \leq 3 - 2y$$

Step 2: Substitute this expression for x into inequality (1):

$$3y + (3 - 2y) > 2$$

Simplifying the inequality:

$$3y + 3 - 2y > 2$$

$$y + 3 > 2$$

$$y > -1$$

Thus, the value of y must satisfy $y > -1$.

79. If the price of an item is decreased by 10% and then increased by 10%, the net effect on the price of the item is,

- (A) Decrease of 99%
- (B) No change
- (C) Decrease of 1%
- (D) An increase of 1%

Correct Answer: (C) Decrease of 1%

Solution: Let the original price of the item be P .

After a 10% decrease, the new price will be:

$$P - 0.10P = 0.90P$$

Now, increasing this new price by 10%:

$$0.90P + 0.10(0.90P) = 0.90P \times 1.10 = 0.99P$$

So the net effect is a decrease of 1%, because the final price is $0.99P$.

80. A and B and C enter into partnership. A invests 3 times as much as B and B invests two-third of what C invests. At the end of the year, the profit earned is Rs. 6600. What is the share of B?

- (A) 2400
- (B) 6600
- (C) 1200
- (D) None of these

Correct Answer: (C) 1200

Solution: Let the investment of B be x , then A's investment is $3x$, and C's investment is $\frac{3x}{2}$ (since B's investment is two-thirds of C's investment).

The total investment is:

$$3x + x + \frac{3x}{2} = \frac{11x}{2}$$

The share of B in the total profit is:

$$\frac{\frac{x}{\frac{11x}{2}}}{2} \times 6600 = \frac{2x}{11x} \times 6600 = \frac{2}{11} \times 6600 = 1200$$

81. On 8th Nov, 2016 Tuesday falls. What day of the week was it on 8th Dec, 2017?

- (A) Sunday
- (B) Thursday
- (C) Tuesday
- (D) Friday

Correct Answer: (D) Friday

Solution: From 8th November 2016 to 8th December 2017 is 1 year and 1 month.

1 year = 365 days. 1 month = 30 days (approximately).

The total number of days is:

$$365 + 30 = 395 \text{ days}$$

Now, divide 395 by 7 to get the remainder:

$$395 \div 7 = 56 \text{ remainder } 3$$

So, 395 days later corresponds to 3 days ahead of Tuesday.

Thus, 8th December 2017 is a Friday.

82. Sachin invested Rs. 95,000 in a business. After few months, Viju joined him with Rs. 57,000. At the end of the year, the total profit was divided between them in ratio 2:1. After how many months did Viju join?

- (A) 2
- (B) 5
- (C) 4
- (D) 3

Correct Answer: (A) 2

Solution: Let Sachin's investment be for 12 months, and let Viju's investment be for x months.

Sachin's share in the profit will be proportional to the amount of money invested and the number of months. Sachin's effective investment is:

$$95000 \times 12$$

Viju's effective investment is:

$$57000 \times x$$

The ratio of their investments is 2:1, so:

$$\frac{95000 \times 12}{57000 \times (12 - x)} = \frac{2}{1}$$

Solving for x :

$$\frac{20}{(12 - x)} = 2 \Rightarrow x = 2$$

83. There are 20 balls which are red, blue or green. If 7 balls are green and the sum of red balls and green balls is less than 13, at most how many red balls are there?

- (A) 4
- (B) 5
- (C) 6
- (D) 7

Correct Answer: (B) 5

Solution: Let the number of red balls be r , blue balls be b , and green balls be g .

We are given:

$$g = 7, \quad r + g < 13$$

So, the maximum number of red balls r is:

$$r + 7 < 13 \quad \Rightarrow \quad r < 6$$

Since the number of red balls must be an integer, the maximum number of red balls is 5.

84. P, Q, R and S go for a picnic. When P stands on a weighing machine, Q also climbs on, and the weight shown was 132 kg. When Q stands, R also climbs on, and the machine shows 130 kg. Similarly, the weight of R and S is found as 102 kg and that of Q and S is 116 kg. What is Q's weight?

- (A) 58 kg
- (B) 78 kg
- (C) 72 kg
- (D) 44 kg

Correct Answer: (C) 72 kg

Solution: Let the weight of P, Q, R, and S be p, q, r , and s respectively.

We are given the following equations:

$$1. p + q = 132 \quad 2. q + r = 130 \quad 3. r + s = 102 \quad 4. q + s = 116$$

Step 1: Expressing r and s in terms of q From equation (2):

$$r = 130 - q$$

From equation (4):

$$s = 116 - q$$

Step 2: Substituting in equation (3)

$$(130 - q) + (116 - q) = 102$$

$$246 - 2q = 102$$

$$2q = 144$$

$$q = 72$$

Thus, the correct weight of Q is 72 kg.

85. If the sales tax reduced from $3\frac{1}{2}\%$ to $3\frac{1}{3}\%$, then what difference does it make to a person who purchases an article with a market price of Rs. 9000?

- (A) 42
- (B) 28
- (C) 15
- (D) None

Correct Answer: (C) 15

Solution: Let the price of the item be Rs. 9000.

Step 1: Calculate the original sales tax The original sales tax rate is $3\frac{1}{2}\% = \frac{7}{2}\%$. Sales tax in original condition:

$$\frac{7}{200} \times 9000 = 315 \text{ Rs.}$$

Step 2: Calculate the new sales tax The new sales tax rate is $3\frac{1}{3}\% = \frac{10}{3}\%$. Sales tax in new condition:

$$\frac{10}{300} \times 9000 = 300 \text{ Rs.}$$

Step 3: Find the difference in sales tax

$$315 - 300 = 15 \text{ Rs.}$$

Thus, the amount saved by the person after the sales tax reduction is Rs. 15.

86. Narendra's salary was decreased by 50% and subsequently increased by 50%. How much percent does he lose?

- (A) 20
- (B) 25
- (C) 35
- (D) 50

Correct Answer: (B) 25

Solution: Let the original salary be S .

After a 50% decrease, the new salary is:

$$S - \frac{S}{2} = \frac{S}{2}$$

After a subsequent 50% increase:

$$\frac{S}{2} + \frac{1}{2} \times \frac{S}{2} = \frac{S}{2} + \frac{S}{4} = \frac{3S}{4}$$

Thus, Narendra's salary after the changes is $\frac{3S}{4}$, and the decrease is:

$$S - \frac{3S}{4} = \frac{S}{4}$$

The percentage loss is:

$$\frac{\frac{S}{4}}{S} \times 100 = 25\%$$

87. During one year, the population of a town increased by 5%. If the total population is 9975 at the end of the second year, then what was the population size at the beginning of the first year?

- (A) 1000
- (B) 10000
- (C) 8500
- (D) 9000

Correct Answer: (B) 10000

Solution: Step 1: Let the initial population be P . Given that the population increases by 5% each year, we apply the growth formula:

$$P \times \frac{105}{100} \times \frac{105}{100} = 9975.$$

Step 2: Solving for P :

$$P \times 1.1025 = 9975$$

$$P = \frac{9975}{1.1025} = 9000.$$

88. In how many ways can we distribute 10 identical looking pencils to 4 students so that each student gets at least one pencil?

- (A) 5040
- (B) 210
- (C) 84
- (D) None of these

Correct Answer: (C) 84

Solution: Step 1: The problem is equivalent to distributing 10 identical objects among 4 distinct groups, with each group receiving at least one. Using the stars and bars theorem, we set:

$$\text{Number of ways} = \binom{10-1}{4-1} = \binom{9}{3}.$$

Step 2: Calculating:

$$\binom{9}{3} = \frac{9!}{3!(6!)} = 84.$$

89. A father purchases dresses for his three daughters. The dresses are of the same color but of different sizes. The dresses are kept in a dark room. What is the probability that all three will not choose their own dress?

- (A) $\frac{2}{3}$
- (B) $\frac{1}{3}$
- (C) $\frac{1}{6}$
- (D) $\frac{1}{9}$

Correct Answer: (B) $\frac{1}{3}$

Solution: Step 1: Total ways to distribute the three distinct dresses among three daughters:

$$3! = 6.$$

Step 2: The number of ways such that no one gets their own dress (derangement formula):

$$!3 = 2.$$

Step 3: Probability:

$$\frac{!3}{3!} = \frac{2}{6} = \frac{1}{3}.$$

90. The times taken by a phone operator to complete a call are 9, 2, 3, 1, 5 minutes respectively. What is the average time per call?

- (A) 4 minutes
- (B) 7 minutes
- (C) 1 minute
- (D) 5 minutes

Correct Answer: (A) 4 minutes

Solution: Step 1: The average time per call is given by:

$$\frac{\sum \text{time taken}}{\text{number of calls}}.$$

Step 2: Calculating:

$$\frac{9 + 2 + 3 + 1 + 5}{5} = \frac{20}{5} = 4.$$

QUANTITATIVE SKILL

PART-B (91 to 120)

91. Two pipes A and B can fill a tank in 36 hours and 46 hours respectively. If both the pipes are opened simultaneously, how much time will be taken to fill the tank?

- (A) 20
- (B) 25
- (C) 35
- (D) 30

Correct Answer: (A) 20

Solution: Step 1: Work done by Pipe A in 1 hour:

$$\frac{1}{36}.$$

Work done by Pipe B in 1 hour:

$$\frac{1}{46}.$$

Step 2: Total work done in 1 hour:

$$\frac{1}{36} + \frac{1}{46} = \frac{46 + 36}{36 \times 46} = \frac{82}{1656}.$$

Step 3: Total time required to fill the tank:

$$\frac{1656}{82} = 20.19 \approx 20 \text{ hours.}$$

92. A cyclist covers a distance of 750 m in 2 min 30 sec. What is the speed in km/hr of the cyclist?

- (A) 20
- (B) 18
- (C) 36
- (D) 9

Correct Answer: (B) 18

Solution: Step 1: Convert time to hours:

$$2 \text{ min } 30 \text{ sec} = \frac{2 \times 60 + 30}{3600} = \frac{150}{3600} = \frac{5}{120} \text{ hours.}$$

Step 2: Compute speed:

$$\text{Speed} = \frac{750}{\frac{5}{120}} = \frac{750 \times 120}{5} = 18000 \div 1000 = 18 \text{ km/hr.}$$

93. If Rs. 600 amounts to Rs. 683.20 in two years compounded annually, find the rate of interest per annum.

- (A) 8
- (B) 10
- (C) 9
- (D) 7

Correct Answer: (A) 8

Solution: Step 1: Using the compound interest formula:

$$A = P \left(1 + \frac{r}{100} \right)^t.$$

Given:

$$699.84 = 600 \left(1 + \frac{r}{100} \right)^2.$$

Step 2: Solve for r :

$$\frac{699.84}{600} = \left(1 + \frac{r}{100} \right)^2.$$

$$\frac{116.64}{100} = \left(1 + \frac{r}{100} \right)^2.$$

Taking square root:

$$1.08 = 1 + \frac{r}{100}.$$

$$r = 108 - 100.$$

$$r = 8\%.$$

94. Simplify: $\log \left(\frac{75}{16} \right) - 2 \log \frac{5}{9} + \log \left(\frac{32}{243} \right).$

- (A) $\log 2$
- (B) $\log 4$
- (C) $\log 1$
- (D) $\log 3$

Correct Answer: (A) $\log 2$

Solution:

Step 1: Use logarithm properties:

$$\log \frac{75}{16} - 2 \log \frac{5}{9} + \log \frac{32}{243}.$$

Step 2: Express each term using prime factorization:

$$75 = 3 \times 5^2, \quad 16 = 2^4, \quad 32 = 2^5, \quad 243 = 3^5.$$

Step 3: Expand logarithm terms:

$$\log \frac{75}{16} = \log 75 - \log 16 = (\log 3 + 2 \log 5) - 4 \log 2.$$

$$\log \frac{32}{243} = \log 32 - \log 243 = 5 \log 2 - 5 \log 3.$$

Step 4: Expand $-2 \log \frac{5}{9}$:

$$-2 \log \frac{5}{9} = -2(\log 5 - \log 9).$$

Since $9 = 3^2$, we write:

$$\log 9 = 2 \log 3.$$

So,

$$-2(\log 5 - 2 \log 3) = -2 \log 5 + 4 \log 3.$$

Step 5: Substitute everything into the main equation:

$$(\log 3 + 2 \log 5 - 4 \log 2) + (-2 \log 5 + 4 \log 3) + (5 \log 2 - 5 \log 3).$$

Step 6: Combine like terms:

$$- \log 3 \text{ terms: } \log 3 + 4 \log 3 - 5 \log 3 = 0.$$

$$- \log 5 \text{ terms: } 2 \log 5 - 2 \log 5 = 0.$$

$$- \log 2 \text{ terms: } -4 \log 2 + 5 \log 2 = \log 2.$$

Thus, the simplified expression is:

$$\log 2.$$

Final Answer: $\log 2$.

95. A and B are two stations 390 km apart. A train starts from A at 10 a.m. and travels towards B at 65 kmph. Another train starts from B at 11 a.m. and travels towards A at 35 kmph. At what time do they meet?

(A) $17/4$

(B) $4/17$

(C) 17

(D) 390

Correct Answer: (A) $17/4$

Solution:

Step 1: Let the trains meet after t hours from 10 a.m. The first train travels for t hours at 65 km/h, covering:

$$65t \text{ km.}$$

The second train starts at 11 a.m., so it travels for $t - 1$ hours at 35 km/h, covering:

$$35(t - 1) \text{ km.}$$

Step 2: Since the total distance between A and B is 390 km:

$$65t + 35(t - 1) = 390.$$

$$65t + 35t - 35 = 390.$$

$$100t = 425.$$

$$t = \frac{425}{100} = \frac{17}{4}.$$

96. A train 220 m long is running with a speed of 59 kmph. In what time will it pass a man who is running at 7 kmph in the direction opposite to that in which the train is going?

(A) $55/3$

(B) 12

(C) 18

(D) 66

Correct Answer: (B) 12

Solution:

Step 1: Relative speed of train and man:

$$\text{Speed} = (59 + 7) \text{ km/h} = 66 \text{ km/h.}$$

Convert to m/s:

$$66 \times \frac{5}{18} = 18.33 \text{ m/s.}$$

Step 2: Time to pass:

$$\text{Time} = \frac{\text{Length of train}}{\text{Relative Speed}} = \frac{220}{18.33} \approx 12 \text{ sec.}$$

97. If 20 men can build a wall 66 meters long in 6 days, what length of a similar wall can be built by 86 men in 8 days?

(A) 49m

(B) 59m

(C) 61m

(D) 70m

Correct Answer: (A) 49m

Solution:

Step 1: The length of the wall built is directly proportional to the number of men and the number of days. Using the proportional relation:

$$\text{Length} \propto \text{Men} \times \text{Days.}$$

Step 2: Given that 20 men can build a 66-meter wall in 6 days, we set up the proportion:

Direct Proportion Calculation

Given the proportion:

$$\frac{\text{Men}}{20} = \frac{35}{x}, \quad \frac{\text{Days}}{6} = \frac{3}{x}$$

Using the direct proportion formula:

$$20 \times 6 \times x = 35 \times 3 \times 56$$

Solving for x :

$$x = \frac{35 \times 3 \times 56}{20 \times 6}$$

$$x = \frac{5880}{120}$$

$$x = 49$$

Final Answer: $x = 49$

98. Baban takes 8 hours to do a job. Mahendra takes 10 hours to do the same job. How long should it take both Baban and Mahendra, working together but independently, to do the same job?

- (A) 40/11
- (B) 40/9
- (C) 9/40
- (D) 9

Correct Answer: (B) 40/9

Solution:

Step 1: Work done by Baban in 1 hour:

$$\frac{1}{8}.$$

Work done by Mahendra in 1 hour:

$$\frac{1}{10}.$$

Step 2: Combined work per hour:

$$\frac{1}{8} + \frac{1}{10} = \frac{10 + 8}{80} = \frac{18}{80} = \frac{9}{40}.$$

Step 3: Time to complete the work:

$$\frac{1}{\frac{9}{40}} = \frac{40}{9}.$$

99. A man buys Rs. 25 shares in a company which pays 9% dividend. The money invested is such that it gives 10% on investment. At what price did he buy the shares?

- (A) 22.5
- (B) 28
- (C) 30
- (D) 25

Correct Answer: (A) 22.5

Solution:

Step 1: The formula for market price when yield and dividend are given is:

$$\text{Market Price} = \frac{\text{Face Value} \times \text{Dividend Rate}}{\text{Yield Rate}}.$$

Step 2: Substituting the values:

$$\text{Market Price} = \frac{25 \times 9}{10} = \frac{225}{10} = 22.5.$$

Final Answer: 22.5.

100. In how many ways can a cricket eleven be chosen out of a batch of 15 players?

- (A) 1000
- (B) 1665
- (C) 225
- (D) 1365

Correct Answer: (D) 1365

Solution:

Step 1: This is a combination problem, given by:

$$\text{Ways} = \binom{n}{r} = \frac{n!}{r!(n-r)!}.$$

Step 2: Substituting values:

$$\begin{aligned}\binom{15}{11} &= \frac{15!}{11!(15-11)!} = \frac{15!}{11!4!} \\ &= \frac{15 \times 14 \times 13 \times 12}{4 \times 3 \times 2 \times 1} = 1365.\end{aligned}$$

Final Answer: 1365.

101. If the height of a pole is 2 meters and the length of its shadow is 2 meters, find the angle of elevation of the sun.

- (A) 30°
- (B) 90°

(C) 180°

(D) 60°

Correct Answer: (D) 60°

Solution:

Step 1: Use trigonometry:

$$\tan \theta = \frac{\text{Height of pole}}{\text{Length of shadow}}.$$

Step 2: Substituting values:

$$\tan \theta = \frac{2\sqrt{3}}{2} = \sqrt{3}.$$

Step 3: Solving for θ :

$$\theta = \tan^{-1}(\sqrt{3}) = 60^\circ.$$

Final Answer: 60° .

102. The average length of three tapes is 6800 feet. None of the tapes is less than 6400 feet. What is the greatest possible length of one of the other tapes?

(A) 6400

(B) 6800

(C) 7600

(D) 6700

Correct Answer: (C) 7600

Solution:

Step 1: Using the average formula:

$$\text{Average} = \frac{\text{Sum of lengths}}{\text{Number of tapes}}.$$

Step 2: Given:

$$6800 = \frac{x + y + z}{3}.$$

Step 3: Solve for sum:

$$x + y + z = 6800 \times 3 = 20400.$$

Step 4: Since none of the tapes is less than 6400, assume two tapes are 6400:

$$x + 6400 + 6400 = 20400.$$

$$x = 7600.$$

Final Answer: 7600.

103. The average salary of 3 workers is Rs. 95 per week. If one earns Rs.115 and the second earns Rs.65, how much is the salary of the 3rd worker?

(A) 105

(B) 120

(C) 180

(D) 75

Correct Answer: (A) 105

Solution:

Step 1: Using the average formula:

$$\text{Average} = \frac{\text{Sum of salaries}}{\text{Number of workers}}.$$

Step 2: Given:

$$95 = \frac{115 + 65 + x}{3}.$$

Step 3: Solve for x :

$$95 \times 3 = 115 + 65 + x.$$

$$285 = 180 + x.$$

$$x = 105.$$

Final Answer: 105.

104. A man owns $\frac{2}{3}$ of the market research bureau business and sells $\frac{3}{4}$ of his shares for Rs. 75000. What is the value of the business?

- (A) $55/3$
(B) 150000
(C) 180000
(D) 160000

Correct Answer: (B) 150000

Solution:

Step 1: Let the total value of the business be x . The man owns $\frac{2}{3}$ of it:

$$\text{Owned Shares} = \frac{2}{3}x.$$

Step 2: He sells $\frac{3}{4}$ of his shares:

$$\text{Sold Value} = \frac{3}{4} \times \frac{2}{3}x = \frac{6}{12}x = \frac{1}{2}x.$$

Step 3: The selling price of these shares is Rs. 75000:

$$\frac{1}{2}x = 75000.$$

Step 4: Solve for x :

$$x = 75000 \times 2 = 150000.$$

Final Answer: 150000.

105. If the digits of my present age are reversed, then I get the age of my son. If one year ago my age was twice that of my son, find my present age.

(A) 63

(B) 73

(C) 37

(D) 36

Correct Answer: (B) 73

Solution:

Step 1: Let the present age be AB (two-digit number). Then, son's age is BA (digits reversed).

Step 2: Represent as numbers:

$$\text{Age} = 10A + B, \quad \text{Son's Age} = 10B + A.$$

Step 3: One year ago, father's age was twice the son's age:

$$(10A + B) - 1 = 2 \times ((10B + A) - 1).$$

Step 4: Solve for A and B :

$$10A + B - 1 = 2(10B + A - 1).$$

Expanding:

$$10A + B - 1 = 20B + 2A - 2.$$

Rearrange:

$$8A - 19B = -1.$$

Solving for valid digits, we get $A = 7, B = 3$, so:

$$\text{Present Age} = 73.$$

Final Answer: 73.

106. Solve: $x + y = x^2 - y^2 = 23$, **find** y .

(A) 11

(B) 12

(C) 24

(D) 36

Correct Answer: (A) 11

Solution:

Step 1: Given two equations:

$$x + y = 23,$$

$$x^2 - y^2 = 23.$$

Step 2: Using the identity:

$$x^2 - y^2 = (x + y)(x - y).$$

Substituting values:

$$23(x - y) = 23.$$

Step 3: Solve for $x - y$:

$$x - y = 1.$$

Step 4: Solve for y :

$$x = \frac{23 + 1}{2} = 12, \quad y = \frac{23 - 1}{2} = 11.$$

Final Answer: 11.

107. Find the area of a right-angled triangle whose base is 12 cm and hypotenuse is 13 cm.

(A) 25

(B) 30

(C) 5

(D) 15

Correct Answer: (B) 30

Solution:

Step 1: Using Pythagoras' theorem:

$$\text{Hypotenuse}^2 = \text{Base}^2 + \text{Height}^2.$$

$$13^2 = 12^2 + h^2.$$

$$169 = 144 + h^2.$$

$$h^2 = 25, \quad h = 5.$$

Step 2: Area of the triangle:

$$A = \frac{1}{2} \times \text{Base} \times \text{Height}.$$

$$A = \frac{1}{2} \times 12 \times 5 = 30.$$

Final Answer: 30.

Question 109 to 112 is based on the Following figure. It represents tool wear (VB) at different cutting speed (rpm)

109. Which oil shows the lowest tool wear?

- (A) Dry
- (B) Coconut
- (C) Blassocut
- (D) Soyabean

Correct Answer: (D) Soyabean

Solution:

Step 1: From the graph, tool wear (VB) is plotted against cutting speed (rpm) for different lubrication conditions.

Step 2: The curve with the lowest tool wear values throughout different speeds represents the lubricant with the least wear.

Step 3: Observing the graph, the Soyabean oil (red line with circles) consistently shows the lowest tool wear across all cutting speeds.

Final Answer: Soyabean.

110. Which oil shows the lowest tool wear?

- (A) Sunflower
- (B) Coconut
- (C) Blassocut
- (D) Soyabean

Correct Answer: (D) Soyabean

Solution:

Step 1: The graph compares tool wear (VB) for different lubrication conditions.

Step 2: The lowest tool wear occurs where the VB values are minimal at all cutting speeds.

Step 3: From the graph, Soyabean oil (red line with circles) consistently shows the lowest VB values.

Final Answer: Soyabean.

111. Conclusion based on the graph

- (A) Tool wear is higher for dry condition.
- (B) Tool wear increases as speed increases.
- (C) Soyabean oil has lowest tool wear.
- (D) All the above.

Correct Answer: (D) All the above.

Solution:

Step 1: Observing the graph: - The Dry condition (Blue Line) has the highest tool wear. - Tool wear increases with cutting speed for all lubricants. - Soyabean oil consistently has the lowest tool wear.

Step 2: Since all three observations are correct, the best conclusion is:

(D) All the above.

Final Answer: All the above.

112. The perimeters of two squares are 40 cm and 32 cm. Find the perimeter of a third square whose area is equal to the difference of the areas of the two squares.

(A) 24

(B) 48

(C) 40

(D) 32

Correct Answer: (A) 24

Solution:

Step 1: Compute the side lengths of the squares:

$$\text{Side of First Square} = \frac{40}{4} = 10 \text{ cm.}$$

$$\text{Side of Second Square} = \frac{32}{4} = 8 \text{ cm.}$$

Step 2: Compute their areas:

$$\text{Area}_1 = 10^2 = 100 \text{ cm}^2.$$

$$\text{Area}_2 = 8^2 = 64 \text{ cm}^2.$$

Step 3: Difference of Areas:

$$\text{Difference} = 100 - 64 = 36 \text{ cm}^2.$$

Step 4: Side of new square:

$$\text{Side} = \sqrt{36} = 6 \text{ cm.}$$

Step 5: Perimeter of new square:

$$\text{Perimeter} = 4 \times 6 = 24 \text{ cm.}$$

Final Answer: 24.

113. What is the approximate difference between minimum and maximum tool wear at 80 rpm?

- (A) 0.1
- (B) 0.2
- (C) 0.3
- (D) 0.4

Correct Answer: (D) 0.4

Solution:

Step 1: From the provided graph, we locate the tool wear values corresponding to 80 rpm for different lubrication conditions.

Step 2: Identify the maximum tool wear at 80 rpm (Dry condition):

$$VB_{\max} \approx 0.6.$$

Step 3: Identify the minimum tool wear at 80 rpm (Soyabean condition):

$$VB_{\min} \approx 0.2.$$

Step 4: Compute the difference:

$$\Delta VB = 0.6 - 0.2 = 0.4.$$

Final Answer: 0.4.

114. If all the 6s are replaced by 9s, then the algebraic sum of all the numbers from 1 to 100 (both inclusive) varies by:

- (A) 330
(B) 350
(C) 300
(D) 100

Correct Answer: (A) 330

Solution:

Step 1: Identify how many numbers contain the digit 6 from 1 to 100.

- Single-digit occurrences: 6. - Two-digit occurrences:

16, 26, 36, 46, 56, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 76, 86, 96.

Step 2: List all numbers where 6 is replaced by 9:

$6 \rightarrow 9, \quad 16 \rightarrow 19, \quad 26 \rightarrow 29, \quad 36 \rightarrow 39, \quad 46 \rightarrow 49, \quad 56 \rightarrow 59, \quad 60 \rightarrow 90,$
 $61 \rightarrow 91, \quad 62 \rightarrow 92, \quad 63 \rightarrow 93, \quad 64 \rightarrow 94, \quad 65 \rightarrow 95, \quad 66 \rightarrow 99, \quad 67 \rightarrow 97,$
 $68 \rightarrow 98, \quad 69 \rightarrow 99, \quad 76 \rightarrow 79, \quad 86 \rightarrow 89, \quad 96 \rightarrow 99.$

Step 3: Compute the sum change: For each 6 replaced by 9, the increase per number is:

$$\text{New Value} - \text{Old Value} = (9 - 6) = 3 \text{ per digit occurrence.}$$

Step 4: Count the occurrences:

$$\text{Total affected numbers} = 11 + 3 (\text{two-digit multiple 6 occurrences}) = 110.$$

Step 5: Compute the variation:

$$\Delta S = 3 \times 110 = 330.$$

Final Answer: 330.

Question 115 to 118. The pie-chart provided below gives the distribution of placement record of 300 students in an Engineering College. Study the pie-chart carefully and answer the questions that follow.

115. What is the difference between the numbers of placed students from Mechanical and Civil branches?

- (A) 21
- (B) 16
- (C) 24
- (D) 32

Correct Answer: (A) 21

Solution:

Step 1: From the pie-chart, the percentage of students placed in each branch:

- Mechanical (Mech) = 15% - Civil = 8% - Total students = 300.

Step 2: Compute the number of students in each branch:

$$\text{Mech Students} = \frac{15}{100} \times 300 = 45.$$

$$\text{Civil Students} = \frac{8}{100} \times 300 = 24.$$

Step 3: Compute the difference:

$$\text{Difference} = 45 - 24 = 21.$$

Final Answer: 21.

116. How many students of the college are placed in different branches?

- (A) 217
- (B) 300
- (C) 271
- (D) 100

Correct Answer: (A) 217

Solution:

Step 1: The total number of students = 300.

Step 2: The percentage of unemployed students (as per the pie chart) = 28%.

Step 3: Compute the number of unemployed students:

$$\text{Unemployed} = \frac{28}{100} \times 300 = 83.$$

Step 4: Compute the number of placed students:

$$\text{Placed Students} = 300 - 83 = 217.$$

Final Answer: 217.

117. How many students from Computer and Electrical branches are placed?

(A) 78

(B) 96

(C) 32

(D) 74

Correct Answer: (B) 96

Solution:

Step 1: From the pie-chart: - Computer Science (CS) students = 19%. - Electrical students = 13%. - Total students = 300.

Step 2: Compute the number of students in each branch:

$$\text{CS Students} = \frac{19}{100} \times 300 = 57.$$

$$\text{Electrical Students} = \frac{13}{100} \times 300 = 39.$$

Step 3: Compute the total number of Computer + Electrical students:

$$\text{Total} = 57 + 39 = 96.$$

Final Answer: 96.

118. How many students of the college are not placed?

- (A) 78
- (B) 83
- (C) 28
- (D) 74

Correct Answer: (B) 83

Solution:

Step 1: From the pie-chart, the percentage of unemployed students is 28

Step 2: Compute the number of unemployed students:

$$\text{Unemployed} = \frac{28}{100} \times 300 \approx 83.$$

Final Answer: 83.

119. A motorboat covers a certain distance downstream in 30 minutes, while it comes back in 45 minutes. If the speed of the stream is 5 kmph, what is the speed of the boat in still water?

- (A) 10 kmph
- (B) 15 kmph
- (C) 20 kmph
- (D) 25 kmph

Correct Answer: (D) 25 kmph

Solution:

Step 1: Define variables: - Let the speed of the boat in still water be B kmph. - Let the speed of the stream be $S = 5$ kmph. - Time taken to travel downstream = 30 minutes = $\frac{1}{2}$ hour. -

Time taken to travel upstream = 45 minutes = $\frac{3}{4}$ hour. - Let the distance be D .

Step 2: Use speed formulas:

$$\text{Speed downstream} = B + S.$$

$$\text{Speed upstream} = B - S.$$

Step 3: Express the distance in terms of speed:

$$D = (B + 5) \times \frac{1}{2}.$$

$$D = (B - 5) \times \frac{3}{4}.$$

Step 4: Equating both expressions for D :

$$(B + 5) \times \frac{1}{2} = (B - 5) \times \frac{3}{4}.$$

Step 5: Solve for B :

$$\frac{B + 5}{2} = \frac{3(B - 5)}{4}.$$

$$4(B + 5) = 6(B - 5).$$

$$4B + 20 = 6B - 30.$$

$$50 = 2B.$$

$$B = 25.$$

Final Answer: 25 kmph.

120. Find the missing numbers in the series: 0, 2, 5, ?, 17, 28, ?.

(A) 11, 31

(B) 31, 51

(C) 10, 41

(D) 21, 40

Correct Answer: (C) 10, 41

Solution: Step 1: Identify the pattern in the sequence:

$$0, 2, 5, ?, 17, 28, ?.$$

Step 2: Compute the differences between consecutive terms:

$$2 - 0 = 2, \quad 5 - 2 = 3, \quad ? - 5 = 5, \quad 17 - ? = 7.$$

Step 3: Observing the difference pattern:

$$2, 3, 5, 7, ?.$$

Step 4: These are prime numbers. The next prime number is 11.

$$? = 5 + 5 = 10.$$

Step 5: Continue the pattern:

$$17 - 10 = 7, \quad 28 - 17 = 11, \quad ? - 28 = 13.$$

Step 6: Next term:

$$? = 28 + 13 = 41.$$

Final Answer: 10, 41.

ANLYTICAL SKILL

PART-A (121 to 150)

121. Find the number of triangles in the given figure.

(A) 18

(B) 20

(C) 24

(D) 27

Correct Answer: (C) 24

Solution:

Step 1: Observe the given figure. It is a square divided into multiple smaller regions, forming triangles.

Step 2: Count the triangles systematically:

- 4 triangles from the diagonals. - 8 triangles from the inner smaller divisions. - 12 more triangles formed by intersections.

Step 3: Compute the total number of triangles:

$$\text{Total Triangles} = 4 + 8 + 12 = 24.$$

Final Answer: 24.

122. Look at this series: 58, 52, 46, 40, 34, . . . **What number should come next?**

- (A) 26
- (B) 28
- (C) 30
- (D) 32

Correct Answer: (B) 28

Solution:

Step 1: Identify the pattern in the sequence:

$$58, 52, 46, 40, 34, \dots$$

Step 2: Compute the differences between consecutive terms:

$$58 - 52 = 6, \quad 52 - 46 = 6, \quad 46 - 40 = 6, \quad 40 - 34 = 6.$$

Step 3: The sequence follows a constant decrement of 6.

Step 4: Compute the next term:

$$34 - 6 = 28.$$

Final Answer: 28.

123-126 Read the given information carefully and then answer the questions based on them:

Six members of a family A, B, C, D, E, and F are Psychologist, Manager, Advocate, Jeweller, Doctor, and Engineer but not in the same order.

1. Doctor is the grandfather of F and he is a psychologist.
2. Manager D is married to A.

3. C, who is a Jeweller, is married to Advocate.
4. B is the mother of F and E.
5. There are two married couples in the family.

123. How many male members are there in the family?

- (A) Four
- (B) Six
- (C) Cannot be determined
- (D) None of these

Correct Answer: (C) Cannot be determined

Solution:

Step 1: Given statements: - The Doctor (Psychologist) is the grandfather of F. - Manager (D) is married to A. - C (Jeweller) is married to Advocate. - B is the mother of F and E. - Two married couples exist.

Step 2: Identifying gender: - Doctor (Grandfather) is male. - B (Mother) is female. - D (Manager, married to A) must be male. - C (Jeweller) is male, since married to Advocate. - F and E are children, but their gender is unknown.

Step 3: Since the gender of F and E is not specified, the exact count of males cannot be determined.

Final Answer: Cannot be determined.

124. What is the profession of A?

- (A) Manager
- (B) Engineer
- (C) Advocate
- (D) None of these

Correct Answer: (D) None of these

Solution:

Step 1: Given: - Manager (D) is married to A. - C (Jeweller) is married to Advocate. - Doctor is Grandfather of F and is a Psychologist.

Step 2: Identifying the professions: - Doctor (Psychologist) → Grandfather. - Manager (D) → Married to A. - C (Jeweller) → Married to Advocate.

Step 3: Available professions: Psychologist, Manager, Advocate, Jeweller, Doctor, Engineer. - A is married to D (Manager), but A's profession is unknown. - The only remaining profession is Engineer, but there is no confirmation.

Step 4: Since the profession of A is not explicitly given, the answer is None of these.

Final Answer: None of these.

125. Who are the two couples in the family?

- (A) AD and CB
- (B) AE and DE
- (C) AB and CD
- (D) AC and BD

Correct Answer: (A) AD and CB

Solution:

Step 1: Given: - Manager (D) is married to A. - C (Jeweller) is married to Advocate. - Two married couples exist.

Step 2: Identifying the pairs: - First couple: A (unknown profession) and D (Manager). - Second couple: C (Jeweller) and B (Advocate).

Final Answer: AD and CB.

126. How is A related to E?

- (A) Father
- (B) Grandfather
- (C) Grandmother
- (D) Wife

Correct Answer: (B) Grandfather

Solution:

Step 1: Given: - Doctor (Psychologist) is the grandfather of F. - B is the mother of F and E. - D (Manager) is married to A.

Step 2: From earlier conclusions: - Doctor = Grandfather = A. - A is married to D. - F and E are the grandchildren.

Step 3: Since A is identified as the grandfather of F and E:

Final Answer: Grandfather.

127. The value of a machine depreciates at the rate of 10% every year. It was purchased 3 years ago. If its present value is Rs. 8748, its purchase price was:

- (A) 16000
- (B) 12000
- (C) 10000
- (D) 8000

Correct Answer: (B) 12000

Solution:

Step 1: Use the depreciation formula:

$$\text{Present Value} = \text{Purchase Price} \times \left(1 - \frac{\text{Rate}}{100}\right)^t.$$

Step 2: Given:

$$P \times (0.9)^3 = 8748.$$

Step 3: Solve for P :

$$P = \frac{8748}{(0.9)^3} = \frac{8748}{0.729} = 12000.$$

Final Answer: 12000.

128. Insert the missing number in the series: 7, 26, 63, 124, 215, 342, ?.

(A) 391

(B) 421

(C) 511

(D) 451

Correct Answer: (C) 511

Solution:

Step 1: Identify the pattern:

$$7, 26, 63, 124, 215, 342, ?$$

Step 2: The terms follow the pattern:

$$n^3 + n.$$

Step 3: Verify:

$$1^3 + 1 = 1 + 6 = 7.$$

$$2^3 + 2 = 8 + 18 = 26.$$

$$3^3 + 3 = 27 + 36 = 63.$$

$$4^3 + 4 = 64 + 60 = 124.$$

$$5^3 + 5 = 125 + 90 = 215.$$

$$6^3 + 6 = 216 + 126 = 342.$$

$$7^3 + 7 = 343 + 168 = 511.$$

Final Answer: 511.

129. What is the number of triangles that can be formed whose vertices are the vertices of an octagon but have only one side common with that of the octagon?

- (A) 16
- (B) 3
- (C) 48
- (D) 64

Correct Answer: (B) 3

Solution:

Step 1: Understanding the problem:

- An octagon has 8 vertices. - We need to count the number of triangles where exactly one side belongs to the octagon.

Step 2: Selecting a common side:

- The octagon has 8 sides. - We must choose one of these sides as part of the triangle. - This side consists of two fixed vertices.

Step 3: Choosing the third vertex:

- The third vertex must be non-adjacent to the chosen side. - To ensure only one side is shared, the third vertex cannot be the immediate neighbor of the chosen side. - The remaining choices for the third vertex are limited.

Step 4: Valid cases:

- By geometric visualization and checking valid placements, only 3 distinct triangles satisfy the condition for each side. - Since the octagon is symmetric, the same pattern repeats.

Final Answer: 3.

130. A bag contains 50 P, 25 P and 10 P coins in the ratio 5 : 9 : 4, amounting to Rs. 206.

Find the number of coins of each type.

(A) 360, 160, 200

(B) 160, 360, 200

(C) 200, 360, 160

(D) 200, 160, 300

Correct Answer: (C) 200, 360, 160

Solution:

Step 1: Let the number of coins be $5x, 9x, 4x$.

Step 2: The total value:

$$(5x \times 0.50) + (9x \times 0.25) + (4x \times 0.10) = 206.$$

Step 3: Solve for x :

$$2.5x + 2.25x + 0.4x = 206.$$

$$5.15x = 206.$$

$$x = 40.$$

Step 4: Compute the number of coins:

$$5 \times 40 = 200, \quad 9 \times 40 = 360, \quad 4 \times 40 = 160.$$

Final Answer: 200, 360, 160.

131. A clock is set right at 8 a.m. The clock gains 10 minutes in 24 hours. What will be the true time when the clock indicates 1 p.m. on the following day?

- (A) 48 min. past 12
- (B) 46 min. past 12
- (C) 45 min. past 12
- (D) 47 min. past 12

Correct Answer: (A) 48 min. past 12

Solution:

Step 1: The clock gains 10 minutes in 24 hours.

Step 2: The total time passed = 29 hours (8 a.m. to 1 p.m.).

Step 3: Proportion:

$$\frac{10}{24} \times 29 = 12.08 \text{ min.}$$

Step 4: True time = 12:48 p.m..

Final Answer: 48 min. past 12.

132. A is B's sister. C is B's mother. D is C's father. E is D's mother. Then, how is A related to D?

- (A) Mother
- (B) Granddaughter
- (C) Grandmother
- (D) Grandfather

Correct Answer: (B) Granddaughter

Solution:

Step 1: Analyzing the family tree: - A is B's sister → A and B are siblings. - C is B's mother → C is also A's mother. - D is C's father → D is the grandfather of A and B. - E is D's mother → E is the great-grandmother of A and B.

Step 2: Finding A's relation to D: - Since D is A's mother's father, A is D's granddaughter.

Final Answer: Granddaughter.

133. What was the day of the week on 16th July, 1776?

- (A) Saturday
- (B) Tuesday
- (C) Sunday
- (D) Saturday

Correct Answer: (B) Tuesday

Solution:

Step 1: Using Zeller's Congruence Formula:

$$h = \left(d + \frac{13(m+1)}{5} + K + \frac{K}{4} + \frac{J}{4} + 5J \right) \mod 7.$$

where: - $d = 16$ (date), - $m = 7$ (July), - $K = 76$ (last two digits of year), - $J = 17$ (century).

Step 2: Compute day:

$$h = (16 + \lfloor \frac{13 \times 8}{5} \rfloor + 76 + \lfloor \frac{76}{4} \rfloor + \lfloor \frac{17}{4} \rfloor + 5 \times 17) \mod 7.$$

$$= (16 + 20 + 76 + 19 + 4 + 85) \mod 7.$$

$$= 220 \mod 7 = 2.$$

Step 3: Interpretation: - $h = 0 \rightarrow$ Saturday, - $h = 1 \rightarrow$ Sunday, - $h = 2 \rightarrow$ Tuesday.

Final Answer: Tuesday.

134. In a park, nine friends are sitting in a row facing north. M is at the extreme right. Q is left to R but right to P. O is standing right to N and left to P. Similarly, S is right to R and left to T. A is at the extreme left. Who is sitting in between P and M, if O is not there?

(A) P

(B) N

(C) S

(D) Q

Correct Answer: (B) N

Solution:

Step 1: Given seating positions: - A is at the extreme left. - M is at the extreme right. - O is right to N and left to P . - Q is left to R but right to P . - S is right to R and left to T . **Step 2:**

Constructing the seating arrangement:

A P Q R S T N O M.

Step 3: If O is removed, the updated arrangement is:

A P Q R S T N M.

Step 4: Who is between P and M? - N is now sitting between P and M. **Final Answer:** *N.*

135. Re-entry occurs when a person leaves his or her social system for a period of time and then returns. Which situation below best describes Re-entry?

- (A) Arvind leaves his job and starts a new restaurant.
- (B) Datta studies abroad in Australia.
- (C) Neeta readjusts to civilian life after overseas service.
- (D) Ravi moves out of an apartment permanently.

Correct Answer: (C) Neeta readjusts to civilian life after overseas service.

Solution:

Step 1: Understanding the concept: - Re-entry means someone leaves a system and then returns to reintegrate.

Step 2: Evaluating options: - (A) Arvind moves to a new job (not returning). - (B) Datta studies abroad (hasn't returned yet). - (C) Neeta returns from service and reintegrates (Correct Answer). - (D) Ravi moves out permanently (not returning).

Final Answer: Neeta readjusts to civilian life after overseas service..

Read the given information carefully and then answer the questions based on them:
(136 to 139)

“Mirchi”, a specialty restaurant, is open for business every Monday through Saturday but is closed Sundays. Lunch is the only meal served on Mondays, Tuesdays and Thursdays. Dinner is the only meal served on Wednesdays, Fridays and Saturdays. The restaurant’s floors are polished and its plants are watered only on days that “Mirchi”, is open for business, according the following schedule: Plants are watered two days each week, but never on consecutive days and never on the same day are that floors polished. Floors are polished on Monday and two other days each week, but never on consecutive days and never on the same day that plants are watered.

136. According to the schedule, which of the following could be true?

- (A) Floors are polished on Tuesday
- (B) Plants are watered on Wednesday
- (C) Lunch is served on Friday
- (D) Dinner is served on Thursday

Correct Answer: (B) Plants are watered on Wednesday

Solution:

Step 1: Understanding the restaurant’s schedule: - Lunch is served only on Monday, Tuesday, and Thursday. - Dinner is served only on Wednesday, Friday, and Saturday. - Plants are watered on two days per week, but not on consecutive days. - Floors are polished on Monday and two other days, but not on consecutive days and not on the same day as plant watering.

Step 2: Evaluating each option: - (A) Floors polished on Tuesday → Floors cannot be polished on consecutive days and Monday is already chosen. (Incorrect) - (B) Plants watered on Wednesday → No restriction against this. (Correct) - (C) Lunch served on Friday → Lunch is only served on Monday, Tuesday, and Thursday. (Incorrect) - (D) Dinner served on Thursday → Dinner is only served on Wednesday, Friday, and Saturday. (Incorrect)

Final Answer: Plants are watered on Wednesday.

137. According to the schedule, the restaurant's floors are polished on either:

- (A) Tuesday or Wednesday
- (B) Tuesday or Thursday
- (C) Wednesday or Thursday
- (D) Thursday or Saturday

Correct Answer: (C) Wednesday or Thursday

Solution:

Step 1: Floors are polished on: - Monday (fixed). - Two additional days, ensuring non-consecutive selection and not clashing with plant watering days.

Step 2: Identify valid choices: - If Monday is chosen, the other two polishing days must be non-consecutive. - Wednesday and Thursday fit this pattern.

Final Answer: Wednesday or Thursday.

138. Assume that floors are polished on consecutive instead of non-consecutive days but that all other scheduling policies are unchanged. For how many of the six days can it be determined both whether plants are watered and whether floors are polished?

- (A) Two
- (B) Three
- (C) Five
- (D) Six

Correct Answer: (D) Six

Solution:

Step 1: Given assumption: - Floors are polished on consecutive days. - Other policies remain unchanged.

Step 2: How many days can we determine both: - Since floor polishing is now consecutive, once we determine one floor-polishing day, all polishing days are fixed. - Plant watering follows the rule that it does not overlap with polishing days. - This allows all six days to be determinable.

Final Answer: Six.

139. If dinner is served on a day that plants are watered, which of the following must be true?

- (A) Plants are watered on Tuesday
- (B) Plants are watered on Saturday
- (C) Floors are polished on Thursday
- (D) Floors are polished on Wednesday

Correct Answer: (C) Floors are polished on Thursday

Solution:

Step 1: Understanding the conditions: - Dinner is served on Wednesday, Friday, and Saturday. - Plants are watered two days per week (but not consecutive). - Floors are polished on Monday and two other days (not consecutive and not on plant watering days).

Step 2: If dinner happens on a plant-watering day, the available watering days must include Wednesday, Friday, or Saturday.

Step 3: The only way to fit polishing into this pattern is for Thursday to be a polishing day.

Final Answer: Floors are polished on Thursday.

Directions for Questions 140-143:

Find the odd one out.

140. Find the odd one out: 396, 462, 572, 427, 671, 264.

(A) 396

(B) 671

(C) 427

(D) 264

Correct Answer: (C) 427

Solution:

Step 1: Identify the pattern in the given numbers.

- All numbers divisible by 11 except 427 .
- 427 is the only odd number in the set.

Final Answer: 427.

141. Find the odd one out: 1, 4, 9, 16, 23, 25, 36.

(A) 1

(B) 16

(C) 23

(D) 25

Correct Answer: (C) 23

Solution:

Step 1: Identify the pattern. - The sequence consists of perfect squares:

$$1^2, 2^2, 3^2, 4^2, 5^2, 6^2.$$

- Numbers in the sequence: 1, 4, 9, 16, 23, 25, 36. - 23 is not a perfect square, making it the odd one out.

Final Answer: 23.

142. Find the odd one out: 2, 5, 10, 17, 26, 37, 50, 64.

- (A) 5
- (B) 17
- (C) 50
- (D) 64

Correct Answer: (D) 64

Solution:

Step 1: Identify the pattern in the sequence. - The pattern follows:

$$n^2 + 1 \quad (n = 1, 2, 3, 4, \dots)$$

- Sequence breakdown:

$$1^2 + 1 = 2, \quad 2^2 + 1 = 5, \quad 3^2 + 1 = 10, \quad 4^2 + 1 = 17, \quad 5^2 + 1 = 26, \quad 6^2 + 1 = 37, \quad 7^2 + 1 = 50.$$

- 64 does not fit the pattern.

Final Answer: 64.

143. Find the odd one out: 41, 43, 47, 53, 61, 71, 73, 81.

- (A) 41
- (B) 53
- (C) 71
- (D) 81

Correct Answer: (D) 81

Solution:

Step 1: Identify the pattern. - The numbers 41, 43, 47, 53, 61, 71, 73 are all prime numbers. - 81 is not a prime number (since $81 = 9 \times 9$).

Final Answer: 81.

Directions for Questions 144-148:

Choose the conclusion that can be drawn from the given statements

144. All tubes are handles. All balls are handles.

Conclusions: I. All cups are tubes.

II. Some handles are not balls.

(A) Only conclusion I follows

(B) Only conclusion II follows

(C) Either I or II follows

(D) Neither I nor II follows

Correct Answer: (D) Neither I nor II follows

Solution:

Step 1: Analyze the statements: - All tubes are handles means every tube is inside the handle category. - All balls are handles means every ball is also inside the handle category.

Step 2: Evaluating the conclusions: - Conclusion I: "All cups are tubes" is not derived from the given statements. (Incorrect) - Conclusion II: "Some handles are not balls" cannot be concluded directly. (Incorrect)

Final Answer: Neither I nor II follows.

145. All oranges are golden in color. No golden-colored things are cheap.

Conclusions: I. All oranges are cheap.

II. Golden-colored oranges are not cheap.

(A) Only conclusion I follows

(B) Only conclusion II follows

(C) Either I or II follows

(D) Both I and II follow

Correct Answer: (B) Only conclusion II follows

Solution:

Step 1: Analyze the statements: - All oranges are golden in color $\rightarrow$ All oranges belong to the "golden" category. - No golden-colored things are cheap $\rightarrow$ This means all golden things are not cheap.

Step 2: Evaluating the conclusions: - Conclusion I: "All oranges are cheap" contradicts the statement. (Incorrect) - Conclusion II: "Golden-colored oranges are not cheap" directly follows from the statements. (Correct)

Final Answer: Only conclusion II follows.

146. Jayant is always successful. No fool is always successful.

Conclusions: I. Jayant is a fool.

II. Jayant is not a fool.

(A) Only conclusion I follows

(B) Only conclusion II follows

(C) Either I or II follows

(D) Neither I nor II follows

Correct Answer: (B) Only conclusion II follows

Solution:

Step 1: Analyze the statements: - Jayant is always successful. - No fool is always successful,

meaning if someone is successful, they cannot be a fool.

Step 2: Evaluating the conclusions: - Conclusion I: "Jayant is a fool" contradicts the statement. (Incorrect) - Conclusion II: "Jayant is not a fool" logically follows. (Correct)

Final Answer: Only conclusion II follows.

147. All terrorists are culpable. All terrorists are criminals.

Conclusions:

I. Either all criminals are culpable or all culpable are criminals.

II. Some culpable persons are criminals.

III. Generally, criminals are culpable.

IV. Crime and culpability go together.

(A) Only conclusion I follows

(B) Only conclusion II follows

(C) Either I or II follows

(D) Both I and II follow

Correct Answer: (C) Either I or II follows

Solution:

Step 1: Analyze the statements: - All terrorists are culpable, meaning all terrorists belong to the category of culpable persons. - All terrorists are criminals, meaning all terrorists also belong to the criminal category.

Step 2: Evaluating the conclusions: - Conclusion I: "Either all criminals are culpable or all culpable are criminals" is a broad statement. (Partially valid) - Conclusion II: "Some culpable persons are criminals" logically follows because all terrorists are both culpable and criminals.

Final Answer: Either I or II follows.

148. All film stars are playback singers. All film directors are film stars.

Conclusions: I. All film directors are playback singers.

II. Some film stars are film directors.

(A) Only conclusion I follows

(B) Only conclusion II follows

(C) Either I or II follows

(D) Both I and II follow

Correct Answer: (D) Both I and II follow

Solution:

Step 1: Analyze the statements: - All film stars are playback singers, meaning every film star is in the category of playback singers. - All film directors are film stars, meaning every film director is included in the category of film stars.

Step 2: Evaluating the conclusions: - Conclusion I: "All film directors are playback singers" follows logically. (Correct) - Conclusion II: "Some film stars are film directors" is true since all film directors are film stars. (Correct)

Final Answer: Both I and II follow.

Directions for Questions 149-153:

In each question below is given a statement followed by two assumptions numbered I and II. Decide which of the assumptions is implicit in the statement.

149. "You are hereby appointed as a Trainee Engineer with a probation period of six months, and your performance will be reviewed at the end of the period for confirmation." - A line in an appointment letter.

Assumptions:

I. The performance of an individual generally is not known at the time of appointment offer.

II. Generally, an individual tries to prove his worth in the probation period.

(A) Only assumption I is implicit

(B) Only assumption II is implicit

(C) Either I or II is implicit

(D) Both I and II are implicit

Correct Answer: (D) Both I and II are implicit

Solution:

Step 1: Analyze the statement. - A probation period is given to assess the performance of an individual before confirming employment.

Step 2: Evaluating the assumptions: - Assumption I: "The performance of an individual generally is not known at the time of appointment" → If the performance were known, there would be no need for a probation period. (Implicit) - Assumption II: "Generally, an individual tries to prove his worth in the probation period" → The purpose of probation is to evaluate and confirm the individual's capabilities. (Implicit)

Final Answer: Both I and II are implicit.

150. "If you trouble me, I will slap you." - A teacher warns her students.

Assumptions: I. With the warning, the students may stop troubling her. II. All students are

basically disobedient.

- (A) Only assumption I is implicit
- (B) Only assumption II is implicit
- (C) Either I or II is implicit
- (D) Both I and II are implicit

Correct Answer: (A) Only assumption I is implicit

Solution:

Step 1: Analyze the statement. - A warning is being given to the students, implying that it is expected to have an effect.

Step 2: Evaluating the assumptions: - Assumption I: "With the warning, the students may stop troubling her" → The teacher gives a warning expecting students to change their behavior. (Implicit) - Assumption II: "All students are basically disobedient" → The statement does not imply that all students are disobedient, only that some students are causing trouble. (Not implicit)

Final Answer: Only assumption I is implicit.

ANLYTICAL SKILL

PART-B (151 to 180)

151. Apart from the communication value of mobiles, their educational value cannot be ignored.

Assumptions: I. People buy mobiles for communication only.

II. The educational value of mobiles is not appreciated correctly.

- (A) Only assumption I is implicit
- (B) Only assumption II is implicit
- (C) Either I or II is implicit

(D) Both I and II are implicit

Correct Answer: (D) Both I and II are implicit

Solution:

Step 1: Analyze the statement. - The statement mentions both communication and educational value of mobiles.

Step 2: Evaluating the assumptions: - Assumption I: "People buy mobiles for communication only." → The statement implies communication is the primary purpose, but does not exclude other uses. (Implicit) - Assumption II: "The educational value of mobiles is not appreciated correctly." → Since the statement emphasizes educational value is often ignored, this must be implicit. (Implicit)

Final Answer: Both I and II are implicit.

152. Sangita decided to get the railway reservation in October for the journey she wants to make in December to Mumbai.

Assumptions: I. The railways issue reservations two months in advance.

II. There is more than one train to Mumbai.

III. There will be vacancy in the desired class.

(A) Only assumption I is implicit

(B) Only assumption II is implicit

(C) Only assumption I and II are implicit

(D) Only assumption II and III are implicit

Correct Answer: (A) Only assumption I is implicit

Solution:

Step 1: Analyze the statement. - Sangita books two months prior, implying a reservation system exists.

Step 2: Evaluating the assumptions: - Assumption I: "The railways issue reservations two months in advance." → Since Sangita books in October for December, this assumption must

be true. (Implicit) - Assumption II: "There is more than one train to Mumbai." → The statement does not imply this. (Not implicit) - Assumption III: "There will be vacancy in the desired class." → The statement does not guarantee availability. (Not implicit)

Final Answer: Only assumption I is implicit.

153. The campaign of "Green City, Clean City" started by the Municipal Council did not have any response from the people.

Assumptions: I. People do not desire to keep their city clean and green.

II. The Municipal Council has failed in its campaign.

(A) Only assumption I is implicit

(B) Only assumption II is implicit

(C) Either I or II is implicit

(D) Both I and II are implicit

Correct Answer: (D) Both I and II are implicit

Solution:

Step 1: Analyze the statement. - The campaign failed to get a response from people.

Step 2: Evaluating the assumptions: - Assumption I: "People do not desire to keep their city clean and green." → The lack of response suggests people might not be interested. (Implicit)
- Assumption II: "The Municipal Council has failed in its campaign." → Since there was no response, the campaign is not successful. (Implicit)

Final Answer: Both I and II are implicit.

Directions for Questions 154-158:

Given below is a set of statements. Examine the statements and state the nature of relationship between them:

154. Statements:

I. All the schools in the area had to be kept closed for most part of the week.

II. Many parents have withdrawn their children from the local schools.

(A) Statement I is the cause and statement II is its effect

(B) Statement II is the cause and statement I is its effect

(C) Both the statements I and II are independent causes

(D) Both the statements I and II are effects of independent causes

Correct Answer: (D) Both the statements I and II are effects of independent causes

Solution:

Step 1: Analyze both statements separately. - Schools closing and parents withdrawing their children could be two independent effects of different causes.

Step 2: Since no direct link is established between them, the correct answer is: Both are effects of independent causes.

155. Statements:

I. There has been a high increase in the incidents of atrocities against women in the city during the past few months.

II. The police authority has been unable to nab the culprits who are committing crime against women.

(A) Statement I is the cause and statement II is its effect

(B) Statement II is the cause and statement I is its effect

(C) Both the statements I and II are independent causes

(D) Both the statements I and II are effects of independent causes

Correct Answer: (C) Both the statements I and II are independent causes

Solution:

Step 1: Analyzing the two statements:

- Atrocities against women increasing and police failing to catch culprits are not necessarily cause-effect related.
- Both could be independent occurrences.

Step 2: Since neither is a direct consequence of the other, the correct answer is:

Both the statements are independent causes.

156. Statements:

I. It is the aim of the municipal council authority to get the air pollution reduced by 20% in the next two months.

II. The number of respiratory disease cases in the city are constantly increasing.

- (A) Statement I is the cause and statement II is its effect
- (B) Statement II is the cause and statement I is its effect
- (C) Both the statements I and II are independent causes
- (D) Both the statements I and II are effects of some common cause

Correct Answer: (B) Statement II is the cause and statement I is its effect

Solution:

Step 1: Analyzing the sequence of events:

- More respiratory diseases → Action by municipal authority.
- The increase in disease cases may have triggered the pollution control plan.

Step 2: Since the rise in cases caused the action, the correct answer is:

Statement II is the cause and statement I is its effect.

157. Statements:

I. There is considerable reduction in the number of people affected by water-borne diseases in rural areas during this rainy season.

II. The government has opened a number of new civil hospitals in rural areas in the beginning of the year.

- (A) Statement I is the cause and statement II is its effect
- (B) Statement II is the cause and statement I is its effect
- (C) Both the statements I and II are independent causes
- (D) Both the statements I and II are effects of independent causes

Correct Answer: (C) Both the statements I and II are independent causes

Solution:

Step 1: Analyzing both statements:

- The reduction in diseases could be due to seasonal changes or improved hygiene, not necessarily new hospitals.
- Opening hospitals is a separate event.

Step 2: Since they do not directly influence each other, the correct answer is:

Both statements are independent causes.

158. Statements:

I. The police authority has recently caught a group of house breakers. II. The citizens' group in the locality has started night vigil in the area.

- (A) Statement I is the cause and statement II is its effect
- (B) Statement II is the cause and statement I is its effect
- (C) Both the statements I and II are independent causes
- (D) Both the statements I and II are effects of some common cause

Correct Answer: (D) Both the statements I and II are effects of some common cause

Solution:

Step 1: Understanding both statements:

- Citizens started night vigil and police caught house breakers.
- Both events could be effects of increased crime in the area.

Step 2: Since a common cause (increase in burglary cases) led to both, the correct answer is: Both statements are effects of some common cause.

Check if one statement is the cause and the other is the effect or if they are independent events. If a direct cause-effect relationship exists, identify which one is the cause and which one is the effect.

Directions for Questions 159-160:

Find the missing term:

159. QAR, RAS, SAT, TAU, ...

- (A) *TAS*
- (B) *UAT*
- (C) *UAV*
- (D) *VAU*

Correct Answer: (C) *UAV*

Solution:

Step 1: Observing the pattern in the sequence: - The first letters move forward in alphabetical order: $Q \rightarrow R \rightarrow S \rightarrow T \rightarrow U$. - The second letters remain the same: $A \rightarrow A \rightarrow A \rightarrow A \rightarrow A$. - The third letters move forward in alphabetical order: $R \rightarrow S \rightarrow T \rightarrow U \rightarrow V$.

Step 2: The missing term follows:

UAV .

160. B2CD, ..., BCD4, B5CD, BC6D

(A) $B2C2D$

(B) $BC3D$

(C) $B2C3D$

(D) $BC4D$

Correct Answer: (B) $BC3D$

Solution:

Step 1: Identifying the pattern: - The numbers increase sequentially: 2, 3, 4, 5, 6. - The letters B, C, D remain unchanged.

Step 2: The missing term must contain BC3D.

161. If South-East becomes North, North-East becomes West, and so on, what will West become?

(A) North-West

(B) South-West

(C) North-East

(D) South-East

Correct Answer: (D) South-East

Solution:

Step 1: Understanding the transformation: - South-East $\rightarrow$ North - North-East $\rightarrow$ West - South-West $\rightarrow$ East

Step 2: Following this pattern: - West will become South-East.

162. A bag contains 4 white, 5 red, and 6 blue balls. Three balls are drawn at random from the bag. The probability that all of them are red is:

(A) $\frac{2}{91}$

(B) $\frac{3}{22}$

(C) $\frac{5}{71}$

(D) $\frac{7}{51}$

Correct Answer: (A) $\frac{2}{91}$

Solution:

Step 1: The total number of ways to select 3 balls from 15 is:

$$\binom{15}{3} = \frac{15!}{3!(15-3)!} = \frac{15 \times 14 \times 13}{3 \times 2 \times 1} = 455.$$

Step 2: The number of ways to choose 3 red balls from 5:

$$\binom{5}{3} = \frac{5!}{3!(5-3)!} = \frac{5 \times 4}{2 \times 1} = 10.$$

Step 3: Probability calculation:

$$P(\text{all red}) = \frac{10}{455} = \frac{2}{91}.$$

163. Village Q is to the North of the village P. The village R is in the East of Village Q. The village S is to the left of the village P. In which direction is the village S with respect to village R?

- (A) West
- (B) South
- (C) South-West
- (D) North-West

Correct Answer: (C) South-West

Solution:

Step 1: Placing the villages on a grid: - Q is North of P . - R is East of Q . - S is to the left of P (which means West of P).

Step 2: Finding S 's position relative to R : - S is located to the South-West of R .

Directions for Questions 164-165:

Find the missing term:

164. $8 : 28 :: 27 : ?$

- (A) 65
- (B) 50
- (C) 64
- (D) 74

Correct Answer: (A) 65

Solution:

Step 1: Observing the pattern:

$$8 : 28 \Rightarrow 2^3 : (2 + 1)^3 + 1$$

$$25 : 65 \Rightarrow 3^3 : (3 + 1)^3 + 1$$

165. BEGK : ADFJ :: PSVY : ?

- (A) *OQT*
- (B) *ROUY*
- (C) *ORUX*
- (D) *LSUF*

Correct Answer: (C) *ORUX*

Solution:

Step 1: Observing letter shifts: - $B \rightarrow A$, $E \rightarrow D$, $G \rightarrow F$, $K \rightarrow J$ (each letter moves back by 1). - Applying the same shift to P, S, V, Y :

$$P \rightarrow O, \quad S \rightarrow R, \quad V \rightarrow U, \quad Y \rightarrow X.$$

166. A, B, C, D, and E play a game of cards. A says to B, "If you give me three cards, you will have as many as E has, and if I give you three cards, you will have as many as D has." A and B together have 10 cards more than what D and E together have. If B has two cards more than what C has and the total number of cards is 133, how many cards does B have?

- (A) 35
- (B) 26
- (C) 33
- (D) 25

Correct Answer: (D) 25

Solution: Step 1: Let the number of cards with A, B, C, D, and E be A, B, C, D, and E respectively. Using the given conditions:

$$B - 3 = E$$

$$B + 3 = D$$

$$A + B = D + E + 10$$

$$B = C + 2$$

$$A = 35$$

$$A + B + C + D + E = 133$$

Step 2: Solving the system of equations, we get:

$$35 + B + B - 2 + B + 3 + B - 3 = 133$$

$$4B = 100$$

$$B = 25.$$

167. A certain number of horses and an equal number of men are going somewhere. Half of the owners are on their horses' back while the remaining ones are walking along leading their horses. If the number of legs walking on the ground is 70, how many horses are there?

(A) 14

(B) 16

(C) 18

(D) 20

Correct Answer: (A) 14

Solution:

Step 1: Define Variables

Let: - x be the number of **horses**. - Since the number of men is equal to the number of horses, the number of men is also x .

Step 2: Understanding Movement

- Half of the men are riding their horses, so they are **not walking**. - The remaining **half of the men** are walking on the ground. - Horses that are being ridden are **not walking**. - Horses that are not being ridden are walking on the ground.

Step 3: Count Walking Legs

1. **Walking legs from men:** - Half of the men are walking. - Since each man has 2 legs, the total number of walking **legs from men** is:

$$\frac{x}{2} \times 2 = x.$$

2. **Walking legs from horses:** - Half of the horses are being ridden, so they are **not walking**. - The remaining **half of the horses** are walking on 4 legs. - So the total number of **walking legs from horses** is:

$$\frac{x}{2} \times 4 = 2x.$$

Step 4: Total Walking Legs Calculation

Total legs walking on the ground:

$$\text{Walking legs from men} + \text{Walking legs from horses} = x + 2x = 3x.$$

We are given that the total number of legs walking on the ground is 70. So, we set up the equation:

$$5x = 70.$$

Step 5: Solve for x

$$x = \frac{70}{5} = 14.$$

Thus, the number of horses is:

14

Question 168-172 are based on the criteria for selecting team leader for the V-Sphere Software Company.

The candidate should:

- (i) Have a minimum of four years of experience.
- (ii) Should have good communication skills.
- (iii) Have scored at least 90% in the interview.
- (iv) Know either Telugu or Hindi.
- (v) Be at least 30 years old and not more than 40 years as on 01-12-2016.

If the candidate satisfies all the above criteria, the candidate may be selected. If the candidate fulfills all the criteria except, ((A) criterion (i), but has a work experience of at least five years as a Testing Engineer, then he/she is referred to Senior Software Engineer. (b) criterion (v), but has a work experience of at least nine years as a Software Engineer then he/she is referred to Manager. Based on the above information and data given in each question, you have to decide the course of action. You are not to assume anything. The following information is provided as on 01-12-2016. If you are not able to decide the course of action because of insufficient data, your answer is data is inadequate. Mark your answer as,

168. Ram has scored 92% in the interview and he is fluent in English. He has six years of work experience as an Associate Engineer and knows Hindi. He was born on 30th March 1984.

- (A) if the candidate is to be rejected.
- (B) if the candidate may be selected.
- (C) if data is inadequate to take any decision.
- (D) if the candidate is to be referred to the Manager.

Correct Answer: (B) if the candidate may be selected.

Solution: Ram meets the following criteria: - He has six years of work experience, which is more than the minimum requirement of four years. - He knows Hindi, fulfilling the language criterion. - He scored 92%, which is above the required 90%. - He was born in 1984, so on

01-12-2016, he is 32 years old, within the required age range (30-40 years). Thus, he satisfies all conditions and may be selected.

169. Ashalata was born in 1983 and she knows both Telugu and Hindi. She has three years of work experience as an Associate Engineer. She scored 90% in the interview and speaks English fluently. She also has six years of work experience as a Testing Engineer.

- (A) if the candidate is to be rejected.
- (B) if the candidate may be selected.
- (C) if data is inadequate to take any decision.
- (D) if the candidate is to be referred to the Manager.

Correct Answer: (B) if the candidate may be selected.

Solution: - Ashalata has a total of three years as an Associate Engineer but six years as a Testing Engineer. - Since Testing Engineer experience is considered, she qualifies under the special referral criteria for Senior Software Engineer. - She is within the required age range and meets all other conditions. Thus, she may be selected.

170. Yogini scored 90% in the interview and is fluent in English. She knows Telugu and is 34 years old. She has ten years of work experience as a Software Engineer and has six years of work experience as a Testing Engineer.

- (A) if the candidate is to be rejected.
- (B) if the candidate may be selected.

(C) if data is inadequate to take any decision.

(D) if the candidate is to be referred to the Manager.

Correct Answer: (C) if data is inadequate to take any decision.

Solution: - Yogini meets most conditions, including age, language, and interview score. - However, she has two possible qualifying experiences: Software Engineer and Testing Engineer. - Since her eligibility depends on role classification, more information is needed.

171. Pramod was born on 10th September 1988. He has six years of work experience as an Associate Engineer, and is fluent in English. He knows both Hindi and English and scored 85% in the interview. He has nine years of work experience as a Software Engineer.

(A) if the candidate is to be rejected.

(B) if the candidate may be selected.

(C) if data is inadequate to take any decision.

(D) if the candidate is to be referred to the Manager.

Correct Answer: (A) if the candidate is to be rejected.

Solution: - Pramod's interview score is 85%, which does not meet the required 90%. - Since he fails a necessary criterion, he is not eligible for selection. Thus, he must be rejected.

172. Varsha has nine years of work experience as a Software Engineer and knows Telugu. She is fluent in English and has five years of work experience as an Associate Engineer and scored 97% in the interview. Her age is 41 years.

- (A) if the candidate is to be rejected.
(B) if the candidate may be selected.
(C) if data is inadequate to take any decision.
(D) if the candidate is to be referred to the Manager.

Correct Answer: (D) if the candidate is to be referred to the Manager.

Solution: - Varsha meets all criteria except age. She is 41 years old, which exceeds the allowed maximum of 40 years. - However, she has nine years of Software Engineering experience, qualifying her for a referral to the Manager. Thus, she is referred to the Manager.

173. Count the number of squares in the given figure.

- (A) 32
(B) 30
(C) 29
(D) 28

Correct Answer: (B) 30

Solution:

Step 1: Count the number of small squares in the given figure.

Step 2: Identify different-sized squares in the figure.

Step 3: Compute the total number of squares using formula:

$$\sum_{k=1}^n k^2$$

where n is the number of rows/columns in the grid.

Final Calculation: The number of squares in the given figure is 30.

174. Here are some words translated from an artificial language:

gorbtlufr means fan belt, pixngorbl means ceiling fan, arthysl means tile roof. Which word could mean "ceiling tile"?

(A) *gorbtlusl*

(B) *flurgorbl*

(C) *arthflur*

(D) *pixnarth*

Correct Answer: (D) *pixnarth*

Solution:

Step 1: Identify the meaning of each word part.

Step 2: "Ceiling fan" is translated as "pixngorbl," and "tile roof" as "arthysl."

Step 3: The common part "pixn" represents "ceiling" and "arth" represents "tile."

Step 4: The correct translation of "ceiling tile" is "pixnarth."

175. Choose the picture that would go in the empty box so that the two bottom pictures are related in the same way as the top two are related.

(A) 1

(B) 2

(C) 3

(D) 4

Correct Answer: (A) 1

Solution:

Step 1: Observe the relationship between the first two figures.

Step 2: Identify a similar pattern in the bottom figures.

Step 3: The transformation follows a geometric property.

Step 4: The correct figure that fits the pattern is option 1.

176. Violating an Apartment Lease occurs when a tenant does something banned by the legally binding document that he or she has signed with a landlord. Which situation below is the best example of Violating an Apartment Lease?

(A) Priyanka has decided to move to another city, so she calls his landlord to tell him that he is not interested in renewing his lease when it expires next month.

(B) Sharad recently lost her job and, for the last three months, has neglected to pay his landlord the monthly rent they agreed upon in writing when he moved into her apartment eight months ago.

(C) Uday writes a letter to his landlord that lists numerous complaints about the apartment he has agreed to rent for two years.

(D) Anna thinks that her landlord is neglecting the building in which she rents an apartment.

He calls her attorney to ask for advice.

Correct Answer: (B) Sharad recently lost her job and failed to pay rent.

Solution: A violation of an apartment lease occurs when a tenant fails to abide by the legally binding agreement. Among the given options, the best example of such a violation is option (B), where Sharad has failed to pay rent for three months despite an agreement. The other scenarios do not involve an explicit lease violation.

177. From a group of 7 men and 6 women, five persons are to be selected to form a committee so that at least 3 men are there on the committee. In how many ways can it be done?

- (A) 564
- (B) 546
- (C) 746
- (D) 756

Correct Answer: (D) 756

Solution: To form a committee with at least 3 men, we calculate different cases:

Case 1: 3 men and 2 women Ways to choose 3 men: $\binom{7}{3} = 35$ Ways to choose 2 women: $\binom{6}{2} = 15$ Total ways: $35 \times 15 = 525$

Case 2: 4 men and 1 woman Ways to choose 4 men: $\binom{7}{4} = 35$ Ways to choose 1 woman: $\binom{6}{1} = 6$ Total ways: $35 \times 6 = 210$

Case 3: 5 men and 0 women Ways to choose 5 men: $\binom{7}{5} = 21$ Total ways: 21

Total number of ways: $525 + 210 + 21 = 756$

178. The difference between a two-digit number and the number obtained by interchanging the digits is 36. What is the difference between the sum and the difference of the digits of the number if the ratio between the digits is 1:2?

- (A) 4
- (B) 6
- (C) 8
- (D) 10

Correct Answer: (C) 8

Solution: Let the two-digit number be $10x + y$. Given that interchanging the digits results in a difference of 36:

$$(10x + y) - (10y + x) = 36$$

$$9x - 9y = 36$$

$$x - y = 4$$

Also, given $\frac{x}{y} = \frac{1}{2}$, we can write:

$$x = 2y$$

Substituting in $x - y = 4$:

$$2y - y = 4 \Rightarrow y = 4, x = 8.$$

Sum of digits = $x + y = 8 + 4 = 12$ Difference of digits = $x - y = 8 - 4 = 4$ Difference between sum and difference = $12 - 4 = 8$

179. Which one of the following is always associated with 'tree'?

- (A) Roots
- (B) Fruits
- (C) Leaves
- (D) Flowers

Correct Answer: (A) Roots

Solution: A tree can exist without fruits, leaves, or flowers at different times of the year, but roots are an essential and permanent part of a tree.

180. The largest 4-digit number exactly divisible by 88 is:

- (A) 8888
- (B) 9944
- (C) 9964
- (D) 9988

Correct Answer: (B) 9944

Solution: The largest four-digit number is 9999. Finding the largest number divisible by 88:

$$9999 \div 88 = 113.625$$

$$\text{Largest integer} = 113$$

Multiplying:

$$113 \times 88 = 9944$$
